

## News Release

### Advanced Digital Logic (ADL) Updates Brand, Website and Adds Own Line of CPU Boards

SAN DIEGO, CA, April 14, 2009 - Advanced Digital Logic (ADL) today unveiled the most inclusive transformation of its corporate identity in the company's history. The new brand is designed to reflect today's ADL, a customer-centric company built on a continuing history of innovative product ideas and services that meet the needs of our customers in the Embedded PC market. As part of our identity rebranding, ADL has also introduced a new corporate logo, a new email address standard (first name@adl-usa.com) and a revamped and enhanced website at our new domain name, [www.adl-usa.com](http://www.adl-usa.com). Please update your records to reflect these changes.

Along with our identity rebranding efforts, ADL proudly offers a new selection of the highest quality and often the highest performing products in its form factor. For example, the new [ADLS15PC](#), a PC/104-plus CPU which is based on Intel's Atom Z510/Z530, offers a strong set of features that will allow customers the possibility of a "drop - in" performance upgrade with reduced power requirements, while remaining compatible with existing PC/104 platforms. The [ADL945PC](#) supports up to a 2.16GHz Intel Core 2 Duo processor (T7400), providing the highest performance currently available in PCI-104.

All ADL branded CPU boards are designed to accept ADL advanced stand-alone or wall-mounted thermal solutions. These solutions are engineered to allow our products to perform in the harshest environments from the beginning of the customer's project. ADL also provides value added engineering services such as custom enclosure design, system integration and board modifications to aid with integration into customer platforms. With ADL's cutting edge performance and attention to detail, ADL products are designed to set a new standard within the PC/104 industry.

ADL will continue, as in the past 14 years, to represent and support all products of Digital Logic AG, Switzerland.

#### **About Advanced Digital Logic, Inc.**

ADL is a leading provider of industrial single board computers, systems, peripherals and accessories for "embedded" and "stand alone" applications. Our wide range of high quality products, system integration expertise, technical and customer support is rated to be first class by our customers. Our products are designed and manufactured under ISO 9001 with state-of-the-art equipment and tested during production at the factory. All computer boards and systems are individually tested at ADL before shipping.

ADL serves customers in a variety of markets, including but not limited to Military, Medical, Transportation, Communication, Security, Process Control, and Science, just to name a few. ADL is headquartered in San Diego, California. For more information about ADL, visit its website at <http://www.adl-usa.com/>.
