0 Document History

Revision	Changes
0.9	first AuthorIT-managed version, many changes, e.g.: - new photographs (D5) - "merging" effort between several English versions - new connector symbols - several minor bugs corrected todo: update dimensional drawing
1.0	updated PCI table, minor changes
1.1	updated dimensional drawings
3.0	- new version number (older, pre-AIT versions had already reached 2.x) - added connector map - updated block diagram - updated temperature ranges - several small changes
3.1	updated contact details, minor changes
3.2	minor changes
3.3	added caution note regarding PS_ON, minor changes
3.4	improved output quality of dimensional drawings, minor changes

NOTE

All company names, brand names, and product names referred to in this manual are registered or unregistered trademarks of their respective holders and are, as such, protected by national and international law.

1 Introduction

1.1 Important Notes

Please read this manual carefully before you begin installation of this hardware device. To avoid Electrostatic Discharge (ESD) or transient voltage damage to the board, adhere to the following rules at all times:

- You must discharge your body from electricity before touching this board.
- Tools you use must be discharged from electricity as well.
- Please ensure that neither the board you want to install, nor the unit on which you want to install this board, is energized before installation is completed.
- Please do not touch any devices or components on the board.

CAUTION

As soon as the board is connected to a working power supply, touching the board may result in electrical shock, even if the board has not been switched on yet. Please also note that the mounting holes for heat sinks are connected to ground, so when using an externally AC powered device, a substantial ground plane differential can occur if the external device's AC power supply or cable does not include an earth ground. This could also result in electrical shock when touching the device and the heat sink simultaneously.

1.2 Technical Support

Technical support for this product can be obtained in the following ways:

- By contacting our support staff at +1 858-490-0597 or +49 (0) 271 250 810 0
- By contacting our staff via e-mail at support@adl-usa.com or support@adl-europe.com
- Via our website at www.adl-usa.com/support or www.adl-europe.com/support

1.3 Warranty

This product is warranted to be free of defects in workmanship and material. ADL Embedded Solutions' sole obligation under this warranty is to provide replacement parts or repair services at no charge, except shipping cost. Such defects which appear within 12 months of original shipment of ADL Embedded Solutions will be covered, provided a written claim for service under warranty is received by ADL Embedded Solutions no less than 30 days prior to the end of the warranty period or within 30 days of discovery of the defect – whichever comes first. Warranty coverage is contingent upon proper handling and operation of the product. Improper use such as unauthorized modifications or repair, operation outside of specified ratings, or physical damage may void any service claims under warranty.

1.4 Return Authorization

All equipment returned to ADL Embedded Solutions for evaluation, repair, credit return, modification, or any other reason must be accompanied by a Return Material Authorization (RMA) number. ADL Embedded Solutions requires a completed RMA request form to be submitted in order to issue an RMA number. The form can be found under the Support section at our website: www.adl-usa.com or www.adl-europe.com. Submit the completed form to support@adl-usa.com or fax to +1 858-490-0599 for the USA office, or to rma@adl-europe.com or fax to +49 (0) 271 250 810 20 to request an RMA from the European office in Germany. Following a review of the information provided, ADL Embedded Solutions will issue an RMA number.

1.5 Description of Safety Symbols

The following safety symbols are used in this documentation. They are intended to alert the reader to the associated safety instructions.

ACUTE RISK OF INJURY!

If you do not adhere to the safety advise next to this symbol, there is immediate danger to life and health of individuals!

RISK OF INJURY!

If you do not adhere to the safety advise next to this symbol, there is danger to life and health of individuals!

HAZARD TO INDIVIDUALS, ENVIRONMENT, DEVICES, OR DATA!

If you do not adhere to the safety advise next to this symbol, there is obvious hazard to individuals, to environment, to materials, or to data.

NOTE OR POINTER

This symbol indicates information that contributes to better understanding.

1.6 RoHS

The PCB and all components are RoHS compliant (RoHS = Restriction of Hazardous Substances Directive). The soldering process is lead free.

2 Overview

2.1 Features

The ADL855PC is a highly complex PC/104-Plus board with the functionalities of a motherboard. Standard features include an Intel® Pentium® M or Intel® Celeron® M CPU, up to 1 GByte RAM (DDR-333) via SoDIMM200, PCI (PC/104-Plus™) and ISA (PC/104™) bus connectors. The ADL855PC also has many additional onboard peripherals: two serial interfaces, one printer interface, floppy connection (via LPT port), LAN connection, Audio in and out, four USB interfaces, CRT and IDE connection.

- Processor Intel® Celeron® M, Pentium® M
- Chipset Intel® 855GME and Intel® ICH4
- SoDIMM200 socket for up to 1 GByte RAM (DDR-333), capable of ECC
- Two serial interfaces COM1 and COM2
- One parallel interface LPT (also for floppy)
- Ethernet 10/100 (Base-T)
- IDE interface
- PS2 keyboard / mouse interface
- Four USB 2.0 interfaces
- AWARD® BIOS 6.10
- CRT connection
- TFT connection, LVDS 18/24Bit (single and dual pixel displays)

- AC97 compatible sound controller with SPDIF in and out
- RTC with external CMOS battery
- 5V single supply voltage
- ISA bus via PC/104 connector
- PCI bus via PC/104-Plus connector
- Size 96 mm x 90 (115,5) mm

3 Detailed Description

3.1 Power Supply

The power supply of the hardware module is effected via the power connector. The board only requires an operating voltage of 5 volt \pm 5%.

3.2 CPU

The board can be ordered with one of the following processors employed: Intel® Celeron® M, Intel® Celeron® M ULV, Intel® Pentium® M. The package type allows a maximum DIE temperature of 100 degrees Celsius and accords highest possible security even in rough environment.

The processors include a second level cache of up to 2 MByte, depending on which model is used.

Furthermore the processors offer many features known from the desktop range such as MMX2, serial number, loadable microcode etc.

3.3 Memory

There is one conventional SoDIMM200 socket available to equip the board with memory. For technical and mechanical reasons it is possible that particular memory modules cannot be employed. Please ask your sales representative for recommended memory modules.

With currently available SoDIMM200 modules a memory extension up to 1 GByte is possible (DDR-333).

4 Connectors

This section describes all the connectors found on the ADL855PC.

CAUTION

For most interfaces, the cables must meet certain requirements. For instance, USB 2.0 requires twisted and shielded cables to reliably maintain full speed data rates. Restrictions on maximum cable length are also in place for many high speed interfaces and for power supply. Please refer to the respective specifications and use suitable cables at all times.

4.1 Connector Map

Please use the connector map below for quick reference. Only connectors on the component side are shown. For more information on each connector refer to the table below.

Ref-No.	Function	Page
P401	"Fan"	p. 34
U403*	"Memory"	p. 16
P700	"Serial Interface COM1"	p. 30
P702	"Parallel Interface LPT"	p. 29
P703	"Serial Interface COM2"	p. 31
P704	"IDE Interface"	p. 28

P1007	"SMBus"	p. 32
P1008	"Monitoring Functions"	p. 33

* not in the picture above (cf. bottom side of board)

4.2 Power Supply

The connector for the power supply is a standard IDC socket connector with a spacing of 2.54 mm. The board only requires an operating voltage of 5 volt ± 5%. 3.3V output to the PC/104-Plus bus is the only off-board supply available.

Should additional voltages be needed for PC/104 expansion cards, these must be provided externally by connecting the respective pins (see below).

For maximum current availability, it is recommended to use both this power connector and the PC/104 connector for power supply.

NOTE

For "Real Time Clock" an external battery (3.3V) must be connected. You can use pins 1 & 3 here or the "System" connector (see next page).

CAUTION

The ADL855PC includes circuitry that will notify an intelligent power supply to shut down if the processor reaches a critical temperature. This is achieved by deasserting the (low-active) PS_ON# signal found on the SM-Bus connector. When PS_ON# is no longer pulled low, an intelligent power supply would take this as a signal to shut down power. For this to work, PS_ON# must be connected to the power supply's PS_ON input. If PS_ON# is not otherwise connected, the ADL855PC can be damaged beyond repair if a thermal shutdown event occurs. In rare instances, if power is not shut down, the board will continue to heat up until failure occurs.

Description	Name	Pin	Name	Description	
ground	GND	1	2	VCC	5 volt supply
CMOS battery >= 3 volt	VBAT	3	4	12V	12 volt supply
-5 volt supply	-5V	5	6	-12V	-12 volt supply
ground	GND	7	8	VCC	5 volt supply

4.3 System

The system connector, which has the main functions that are necessary to start the board, is provided via a standard IDC socket connector with a spacing of 2.54 mm.

This connector supports the following interfaces: PS/2 keyboard, PS/2 mouse, speaker, external RTC-battery and reset of the board.

NOTE

For "Real Time Clock" an external battery (3.3V) must be connected. Connect "+" to VBAT and "-" to GND.

Description	Name	Pin	Name	Description	
speaker to 5 volt	SPEAKER	1	2	GND	ground
reset to ground	RESET#	3	4	KLOCK#	keyboard lock
keyboard Data	KDAT	5	6	KCLK	keyboard clock
mouse data	MDAT	7	8	MCLK	mouse clock
CMOS battery \geq 3 volt	VBAT	9	10	VCC	5 volt supply

4.4 Memory

There is one conventional SoDIMM200 socket available to equip the board with memory (DDR-333). It is located on the bottom side of the board. For technical and mechanical reasons it is possible that particular memory modules cannot be employed. Please ask your sales representative for recommended memory modules.

With currently available SO-DIMM modules a memory extension up to 1 GByte is possible. The timing parameters for different memory modules are automatically set by BIOS.

4.5 PC/104-Bus

An onboard LPC-to-ISA bridge (Fintek® F85226F) makes it possible to expand the functionality of the board with additional PC/104 cards. This interface offers full 16bit ISA compliance. For further information on this interface please refer to the PC/104 specifications (see "Specifications and Documents", p. 10).

4.6 PC/104-Plus Bus

Expansion cards can be connected to the board using the PCI connector first introduced with the PC/104-Plus standard. A maximum of four PC/104-Plus cards are supported. The interrupt routing and the IDSEL signals for the expansion cards are specified in the PC/104-Plus specification (see "Specifications and Documents", p. 10).

Description	Name	Pin	Name	Description
ground	GND	A1 B1	N/C	reserved

4.7 VGA

The CRT-VGA signals are provided by a standard IDC socket connector with a spacing of 2.54 mm. This interface allows the connection of a standard VGA-monitor. I2C communication is supported.

Description	Name	Pin	Name	Description	
analog red	RED	1	2	GND	ground
analog green	GREEN	3	4	DDDA	DD data
analog blue	BLUE	5	6	DDCK	DD clock
vertikal sync	VSYNC	7	8	GND	ground
horizontal sync	HSYNC	9	10	GND	ground

4.8 LCD

The LCD is connected via two 15 pin connectors (Hirose DF13-15P-1.25DSA, mating connector: DF13-15S-xxx). The power supply for the display is also provided through these connectors. The ADL855PC board only supports displays with LVDS interface. For displays with digital interface an extra receiver board is available. There is no support for DSTN displays.

With the LVDS interface it is possible to trigger LVDS displays with a maximum of 24 Bit colour depth and one or two pixels per clock. For single pixel displays only one connector is necessary. However, if you want to read the display's EDID data the second connector must be connected.

The display type can be chosen over the BIOS setup. Please contact your sales representative regarding an appropriate cable to connect your display.

The following table shows the pin description for the first bit ("even" pixel).

Pin	Name	Description
1	GND	ground
2	GND	ground
3	TXO00#	LVDS even data 0 -
4	TXO00	LVDS even data 0 +
5	TXO01#	LVDS even data 1 -
6	TXO01	LVDS even data 1 +
7	TXO02#	LVDS even data 2 -
8	TXO02	LVDS even data 2 +
9	TXO0C#	LVDS even clock -
10	TXO0C	LVDS even clock +
11	TXO03#	LVDS even data 3 -
12	TXO03	LVDS even data 3 +
13	BL_VCC	switched 5 volt for backlight
14	FP_3.3V	switched 3.3 volt for display
15	FP_3.3V	switched 3.3 volt for display

The following table shows the pin description for the second bit ("odd" pixel). This connector will only be used if a display with two pixels per clockcycle is to be connected.

Pin	Name	Description
1	GND	ground
2	GND	ground
3	TXO10#	LVDS odd data 0 -
4	TXO10	LVDS odd data 0 +
5	TXO11#	LVDS odd data 1 -
6	TXO11	LVDS odd data 1 +
7	TXO12#	LVDS odd data 2 -
8	TXO12	LVDS odd data 2 +
9	TXO1C#	LVDS odd clock -
10	TXO1C	LVDS odd clock +
11	TXO13#	LVDS odd data 3 -
12	TXO13	LVDS odd data 3 +
13	DDC_CLK	EDID clock for LCD
14	DDC_DAT	EDID data for LCD
15	VCC	5 volt supply

4.9 USB 1 to 4, LAN, Sound

USB 1-4, LAN and sound are provided via a standard IDC socket connector with a spacing of 2.54 mm. Necessary settings can be accomplished in BIOS setup.

All USB-channels support USB 2.0. You may note that the setting of USB keyboard or USB mouse support in the BIOS-setup is only necessary and advisable, if the OS offers no USB-support. BIOS-setup can be changed with a USB keyboard without enabling USB keyboard support. Running a USB supporting OS (such as Microsoft® Windows®) with these features enabled may lead to significant performance or functionality limitations.

Every USB interface provides up to 500 mA current and is protected by an electronically resettable fuse. The LAN-interface on this connector supports 10BaseT and 100BaseT compatible network components with automatic bandwidth selection. Additional outputs are provided for status LEDs. Auto-negotiate and auto-cross functionality is available, PXE and RPL are available on request.

AC'97 - 2.3 compatible audio I/O is available on this connector. There are two ways to use these signals. Default functionality is the familiar audio in, audio out, and microphone (2-channel mode). OS dependent device drivers can switch these signals to support an 5.1 output; thus in this mode no audio input signals are available. In 2-channel mode LOUT is the only active audio output. Moth MIC inputs are available. In 6-channel mode the speaker outputs are: LOUT to Front, AUXA to Surround, MIC1 to Center and MIC2 to LFE (Sub).

The signals "SPDIFI" and "SPDIFO" provide digital input and output. If a transformation to a coaxial or optical connector is necessary this must be performed externally.

CAUTION

The same IDC socket connector supports all three devices and is not "keyed"! Misconnected support cables may short two devices together and damage the board. Please check diagrams before installing any connecting cables to ensure proper connection.

Description	Name	Pin	Name	Description

4.10 IDE Interface

The primary IDE interface is a standard IDC socket connector with a spacing of 2 mm. All commercial IDE devices are supported but an adapter to connect may be necessary. The required settings are made in the BIOS setup.

 **CAUTION**

Pins are not keyed! Please be sure to connect the cable properly, otherwise you risk damaging the IDE interface, the CPU and the drive, voiding respective warranties.

Pinout for primary IDE

Description	Name	Pin	Pin	Name	Description

4.11 Parallel Interface LPT

The parallel interface is a standard IDC socket connector with a spacing of 2.54 mm. The port address and the interrupt are set via the BIOS setup. The parallel port may be selected in BIOS-setup to interface to a standard PC floppy drive, but a special cable is required for such operation. Please contact your sales representative for such a cable.

Pinout LPT interface (FDC signals in brackets):

Description	Name	Pin	Pin	Name	Description
strobe	STB#	1	2	AFD# (DRV DEN0)	automatic line feed (drive density 0)
LPT data 0 (Index)	PD0 (IDX#)	3	4	ERR# (HDSL#)	error (head select)
LPT data 1 (track 0)	PD1 (TR0#)	5	6	INIT# (DIR#)	init (direction)
LPT data 2 (write protect)	PD2 (WPRT#)	7	8	SLIN# (STP#)	select input (step)
LPT data 3 (read data)	PD3 (RDATA#)	9	10	GND	ground
LPT data 4 (disk change)	PD4 (DC#)	11	12	GND	ground
LPT data 5	PD5	13	14	GND	ground
LPT data 6 (motor 0)	PD6 (MT0#)	15	16	GND	ground
LPT data 7 (drive select 0)	PD7 (DR0#)	17	18	GND	ground
acknowledge (drive select 1)	ACK# (DR1#)	19	20	GND	ground
busy (motor 1)	BUSY (MT1#)	21	22	GND	ground
paper end (write data)	PE (WD#)	23	24	GND	ground
select printer (write enable)	SLCT (WG#)	25	26	VCC	5 volt supply

4.12 Serial Interface COM1

The serial interface is a standard IDC socket connector with a spacing of 2.54 mm. Signals default to RS232 but can be ordered as TTL level too. The port address and the interrupt are set via the BIOS setup.

CAUTION

COM 1 & 2 cables are not the same pin orientation and you may damage the COM interface and CPU attached if you use the incorrect COM cable.

Description	Name	Pin	Pin	Name	Description
data carrier detect	DCD	1	2	DSR	data set ready
receive data	RXD	3	4	RTS	request to send
transmit data	TXD	5	6	CTS	clear to send
data terminal ready	DTR	7	8	RI	ring indicator
ground	GND	9	10	VCC	5 volt supply

4.13 Serial Interface COM2

The serial interface is a standard IDC socket connector with a spacing of 2.54 mm. Signals default to RS232 but can be ordered as TTL level too. The port address and the interrupt are set via the BIOS setup.

CAUTION

COM 1 & 2 cables are not the same pin orientation and you may damage the COM interface and CPU attached if you use the incorrect COM cable.

Description	Name	Pin	Name	Description	
data carrier detect	DCD	1	2	DSR	data set ready
receive data	RXD	3	4	RTS	request to send
transmit data	TXD	5	6	CTS	clear to send
data terminal ready	DTR	7	8	RI	ring indicator
ground	GND	9	10	VCC	5 volt supply

4.14 SMBus

The ADL855PC can communicate with external devices via the SMBus protocol. The signals for this protocol are available through a standard IDC socket connector with a spacing of 2.54 mm. A 3.3 volt power supply is also available for these SMBus devices. Additionally, you can use this connector to access the PWRBTN# and PS_ON# signals used for power control. If PWRBTN# is held low for four seconds an unconditional hardware power-down event will occur.

Pin	Name	Description
1	3.3V	3.3 volt supply
2	CS-SMB-CLK	SMBus clock
3	CS-SMB-DAT	SMBus data
4	SMB-ALERT#	SMBus alert
5	PWRBTN#	power button
6	PS_ON#	power supply on
7	GND	ground

4.15 Monitoring Functions

Additional monitoring functions, such as the status of the fan or of other devices connected over SM-Bus (e. g. temperature sensor), are accessible via an 8 pin connector (JST BM08B-SRSS-TB, mating connector: SHR-08V-S(-B)).

Pin	Name	Description
1	3.3V	3.3 volt supply
2	CS-SMB-CLK	SMBus clock
3	CS-SMB-DAT	SMBus data
4	GND	ground
5	FANON1	5 volt supply (switched)
6	FANCTRL1	fan 1 monitoring signal
7	VCC	5 volt supply
8	FANCTRL3	fan 3 monitoring signal

NOTE

This connector is present on boards of the revision D2 and onwards.

4.16 Fan

A 3 pin connector is available for controlling and monitoring an external fan (5 volt). For the monitoring the fan must provide a corresponding speed signal.

Pin	Name	Description
1	GND	ground
2	FANON2	5 volt supply (switched)
3	FANCTRL2	fan monitoring signal

5 BIOS Settings

5.1 Remarks for Setup Use

In a setup page, standard values for its setup entries can be loaded. Fail-safe defaults are loaded with F6 and optimized defaults are loaded with F7. These standard values are independent of the fact that a board has successfully booted with a setup setting before.

This is different if these defaults are called from the Top Menu. Once a setup setting was saved, which subsequently leads to a successful boot process, those values are loaded as default for all setup items afterwards.

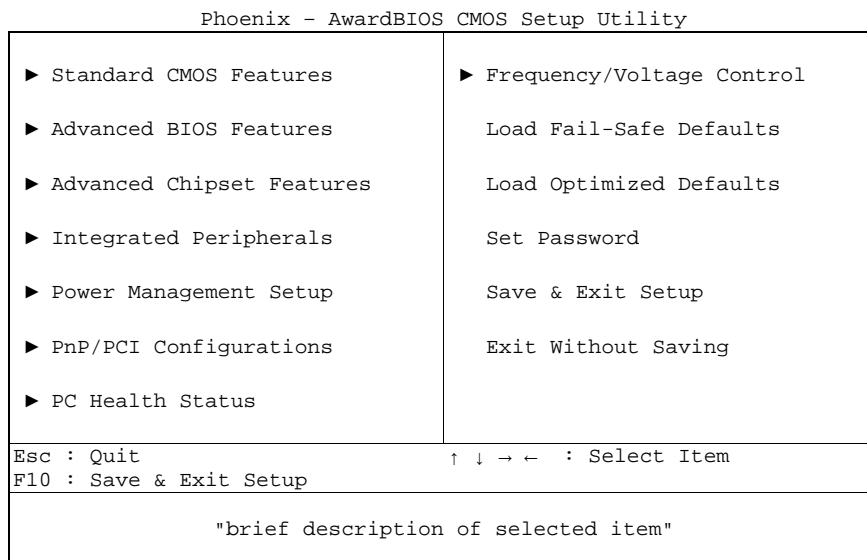

See also the chapters "Load Fail-Safe Defaults" (5.10) and "Load Optimized Defaults" (5.11).

NOTE

BIOS features and setup options are subject to change without notice. The settings displayed in the screenshots on the following pages are meant to be examples only. They do not represent the recommended settings or the default settings. Determination of the appropriate settings is dependent upon the particular application scenario in which the board is used.

5.2 Top Level Menu

The sign „▶“ in front of an item means that there is a sub menu.

The „x“ sign in front of an item means, that the item is disabled but can be enabled by changing or selecting some other item (usually somewhere above the disabled item on the same screen).

Use the arrow buttons to navigate from one item to another. For selecting an item press Enter which will open either a sub menu or a dialog screen.

Options: none

5.11 Load Fail-Safe Defaults

If this option is chosen, the last working setup is loaded from flash. Working means that the setup setting has already led to a successful boot process.

At the first setting of the BIOS setup, safe values are loaded which lets the board boot. This status is reached again, if the board is reprogrammed with the corresponding flash-program and the required parameters.

5.12 Load Optimized Defaults

This option applies like described under "Remarks for Setup Use" (5.1).

At first start of the BIOS, optimized values are loaded from the setup, which are supposed to make the board boot. This status is achieved again, if the board is reprogrammed using the flash program with the required parameters.

5.13 Set Password

Here you can enter a password to protect the BIOS settings against unauthorized changes. Use this option with care! Forgotten or lost passwords are a frequent problem.

5.14 Save & Exit Setup

Settings are saved and the board is restarted.

5.15 Exit Without Saving

This option leaves the setup without saving any changes.

6 BIOS update

If a BIOS update becomes necessary, the program "AWDFLASH.EXE" from Phoenix Technologies is used for this. It is important, that the program is started from a DOS environment without a virtual memory manager such as for example "EMM386.EXE". In case such a memory manager is loaded, the program will stop with an error message.

The system must not be interrupted during the flash process, otherwise the update is stopped and the BIOS is destroyed afterwards.

The program should be started as follows:

```
awdflash [biosfilename] /sn /cc /cp
```

/sn	Do not save the current BIOS
/cc	Clear the CMOS
/cp	Clear the PnP information

The erasure of CMOS and PnP is strongly recommended. This ensures, that the new BIOS works correctly and that all chipset registers, which were saved in the setup, are reinitialized through the BIOS. DMI should only be erased (option /cd) if the BIOS supplier advises to do so.

A complete description of all valid parameters is shown with the parameter "/?".

In order to make the updating process run automatically, the parameter "/py" must be added. This parameter bypasses all security checks during programming.

CAUTION

Updating the BIOS in an improper way can render the board unusable. Therefore, you should only update the BIOS if you really need the changes/corrections which come with the new BIOS version.

CAUTION

Before you proceed to update the BIOS you need to make absolutely sure that you have the right BIOS file which was issued for the exact board and exact board revision that you wish to update. If you try to update the BIOS using the wrong file the board will not start up again.

7 Mechanical Drawing

7.1 PCB: Dimensions

For additional dimensional drawings please refer to the PC/104 specification.

i **NOTE**

All dimensions are in mil (1 mil = 0,0254 mm)

7.2 PCB: Pin1 Dimensions

i **NOTE**

All dimensions are in mil (1 mil = 0,0254 mm)

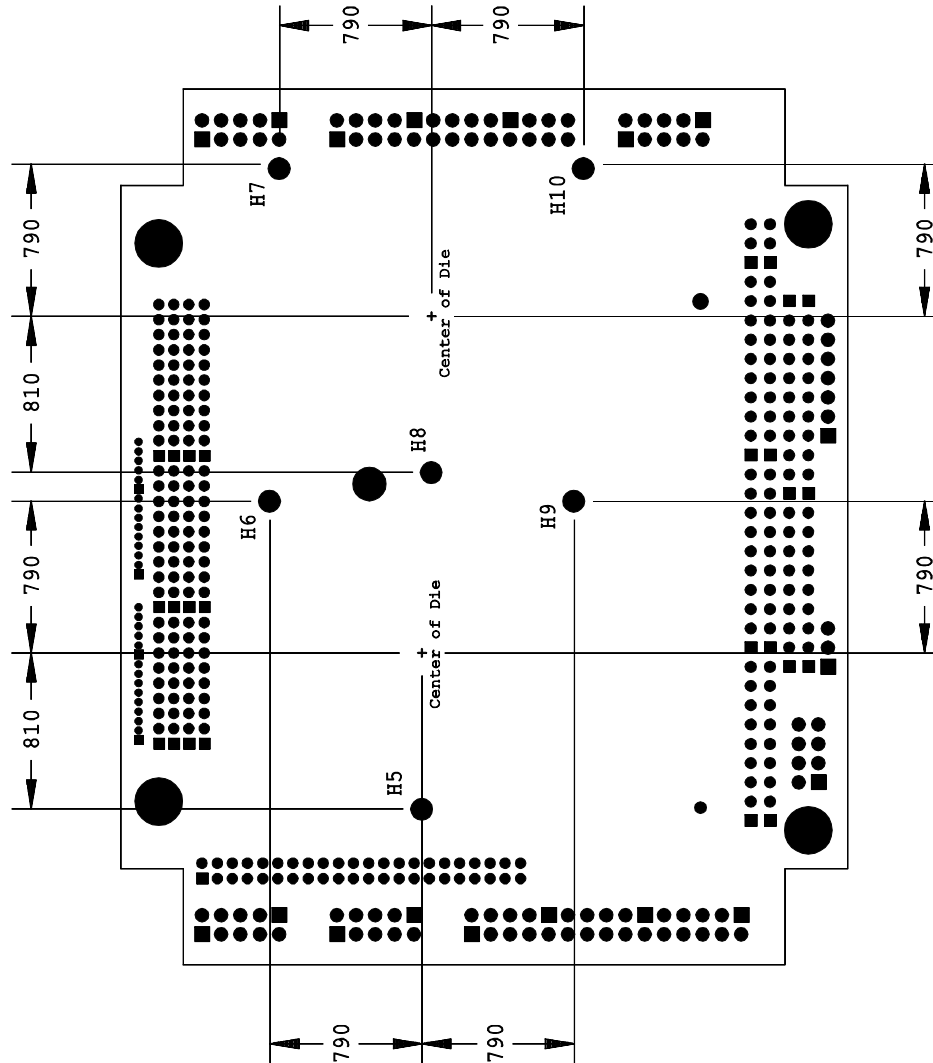

7.3 PCB: Heatsink Dimensions

i **NOTE**

All dimensions are in mil (1 mil = 0,0254 mm)

Hole Size: outer diameter : H1-H4 : 252 H5-H10: 118
drill size : H1-H4 : 126 H5-H10 : 71
All dimensions in mil
Board thickness 66mil (Standard value)

7.4 Heat Spreader: Chassis Mount

The figure below includes all hole spacing for each heat spreader available and can be used to aid in mating the heat spreader to a bulkhead or chassis.

i **NOTE**

Dimensions are in inch (1 in = 2.54cm; 1 mil = 0.0254 mm)

8 Technical Data

8.1 Electrical Data

Power Supply:

Board:	5 Volt +/- 5%
RTC:	>= 3 Volt

Electric Power Consumption:

Board:	1.98A idle, 3.10A full (Pentium M 1.4GHz, 25°C)
RTC:	<= 10μA

8.2 Environmental Conditions

Temperature Range:

Operating:	-25°C to +70°C (using approved thermal solution) -40°C up to +85°C (when pre-screened for use with an approved thermal solution)
Storage:	-40°C up to +85°C
Shipping:	-40°C up to +85°C, for packaged boards

Temperature Changes:

Operating:	0.5°C per minute, 7.5°C per 30 minutes
Storage:	1.0°C per minute
Shipping:	1.0°C per minute, for packaged boards

Relative Humidity:

Operating:	5% up to 85% (non condensing)
Storage:	5% up to 95% (non condensing)
Shipping:	5% up to 100% (non condensing), for packaged boards

Shock:

Operating:	150m/s ² , 6ms
Storage:	400m/s ² , 6ms
Shipping:	400m/s ² , 6ms, for packaged boards

Vibration:

Operating:	10 up to 58Hz, 0.075mm amplitude 58 up to 500Hz, 10m/s ²
Storage:	5 up to 9Hz, 3.5mm amplitude 9 up to 500Hz, 10m/s ²
Shipping:	5 up to 9Hz, 3.5mm amplitude 9 up to 500Hz, 10m/s ² , for packaged boards

CAUTION

Shock and vibration figures pertain to the motherboard alone and do not include additional components such as heat sinks, memory modules, cables etc.

8.3 Thermal Specifications

The board is specified to operate in an environmental temperature range from -25°C to +70°C when using an approved thermal solution, and an extended temperature range of -40°C to +85°C when pre-screened for use with an approved thermal solution.

Maximum die temperature is 100°C. To keep the processor under this threshold an appropriate cooling solution needs to be applied. This solution has to take typical and maximum power consumption into account. The maximum power consumption may be twice as high and should be used as a basis for the cooling concept. Additional controllers may also affect the cooling concept. The power consumption of such components may be comparable to the consumption of the processor.

The board design includes thermal solution mounting points that will provide the best possible thermal interface between die and solution. Since we take thermal solutions seriously we have several advanced, aggressive cooling solutions in our product portfolio. Please contact your sales representative to order or discuss your thermal solution needs.

CAUTION

The end customer has the responsibility to ensure that the die temperature of the processor does not exceed 100°C. Permanent overheating may destroy the board!

In case the temperature exceeds 100°C the environmental temperature must be reduced. Under certain circumstances sufficient air circulation must be provided.

CAUTION

The ADL855PC includes circuitry that will notify an intelligent power supply to shut down if the processor reaches a critical temperature. This is achieved by deasserting the (low-active) PS_ON# signal found on the SM-Bus connector. When PS_ON# is no longer pulled low, an intelligent power supply would take this as a signal to shut down power. For this to work, PS_ON# must be connected to the power supply's PS_ON input. If PS_ON# is not otherwise connected, the ADL855PC can be damaged beyond repair if a thermal shutdown event occurs. In rare instances, if power is not shut down, the board will continue to heat up until failure occurs.

I Annex: Post-Codes

Code	Description
01h	The Xgroup-program code is written in the random access memory from address 1000:0 onwards.
03h	Initialise Variable/Routine "Superio_Early_Init".
05h	1. Cancel display 2. Cancel CMOS error flag
07h	1. Cancel 8042 (keyboard controller) Interface Register 2. Initialising and self testing of 8042 (keyboard controller)
08h	1. Test of special keyboard controllers (Winbond 977 super I/O Chip-series). 2. Enabling of the keyboard-interface register
0Ah	1. Disabling of the PS/2 mouse interface (optional). 2. Auto-detection of the connectors for Keyboard and mouse, optional: swap of PS/2 mouse ports and PS/2 interfaces.
0Eh	Test of the F000h-memory segment (Read/Write ability). In case of an error a signal will come out of the loud speakers.
10h	Auto-detection of the flash-rom-type and loading of the suitable Read/Write program into the run time memory segment F000 (it is required for ESCD-data & the DMI-pool-support).
12h	Interface-test of the CMOS RAM-logic (walking 1's"-algorithm). Setting of the power status of the real-time-clock (RTC), afterwards test of register overflow.
14h	Initialising of the chip-set with default values. They can be modified through a software (MODBIN) by the OEM-customer.
16h	Initialise Variable/Routine "Early_Init_Onboard_Generator".
18h	CPU auto-detection (manufacturer, SMI type (Cyrix or Intel), CPU-class (586 or 686)).
1Bh	Initialising if the interrupt pointer table. If nothing else is pretended, the hardware interrupts will point on "SPURIOUS_INT_HDLR and the software interrupts will point on SPURIOUS_soft_HDLR.
1Dh	Initialise Variable/Routine EARLY_PM_INIT.
1Fh	Load the keyboard table (Notebooks)
21h	Initialising of the hardware power management (HPM) (Notebooks)
23h	1. Test the validity of the RTC-values (Example: "5Ah" is an invalid value for an RTC-minute). 2. Load the CMOS-values into the BIOS Stack. Default-values are loaded if CMOS-checksum errors occur. 3. Preparing of the BIOS 'resource map' for the PCI & plug and play configuration. If ESCD is valid, take into consideration the ESCD's legacy information. 4. Initialise the onboard clock generator. Clock circuit at non-used PCI- and DIMM slots. 5. First initialising of PCI-devices: assign PCI-bus numbers - alot memory- & I/O resources - search for functional VGA-controllers and VGA-BIOS and copy the latter into memory segment C000:0 (Video ROM Shadow).
27h	Initialise cache memory for INT 09
29h	1. Program the CPU (internal MTRR at P6 and PII) for the first memory address range (0-640K). 2. Initialising of the APIC at CPUs of the Pentium-class. 3. Program the chip-set according to the settings of the CMOS-set-up (Example: Onboard IDE-controller). 4. Measuring of the CPU clock speed. 5. Initialise the video BIOS.
2Dh	1. Initialise the "Multi-Language"-function of the BIOS 2. Soft copy, e.g. Award-Logo, CPU-type and CPU clock speed...
33h	Keyboard-reset (except super I/O chips of the Winbond 977 series)
3Ch	Test the 8254 (timer device)
3Eh	Test the interrupt Mask bits of IRQ-channel 1 of the interrupt controller 8259.
40h	Test the interrupt Mask bits of IRQ-channel 2 of the interrupt controller 8259
43h	Testing the function of the interrupt controller (8259).
47h	Initialise EISA slot (if existent).

Code	Description
49h	1. Determination of the entire memory size by revising the last 32-Bit double word of each 64k memory segment. 2. Program "write allocation" at AMD K5-CPU's.
4Eh	1. Program MTRR at M1 CPU's 2. Initialise level 2-cache at CPU's of the class P6 and set the "cacheable range" of the random access memory. 3. Initialise APIC at CPU's of the class P6. 4. Only for multiprocessor systems (MP platform): Setting of the "cacheable range" on the respective smallest value (for the case of non-identical values).
50h	Initialise USB interface
52h	Testing of the entire random access memory and deleting of the extended memory (put on "0")
55h	Only for multi processor systems (MP platform): Indicate the number of CPU's.
57h	1. Indicate the plug and play logo 2. First ISA plug and play initialising – CSN-assignment for each identified ISA plug and play device.
59h	Initialise TrendMicro anti virus program code.
5Bh	(Optional:) Indication of the possibility to start AWDFLASH.EXE (Flash ROM programming) from the hard disk.
5Dh	1. Initialise Variable/Routine Init_Onboard_Super_IO. 2. Initialise Variable/Routine Init_Onboard_AUDIO.
60h	Release for starting the CMOS set-up (this means that before this step of POST, users are not able to access the BIOS set-up).
65h	Initialising of the PS/2 mouse.
67h	Information concerning the size of random access memory for function call (INT 15h with AX-Reg. = E820h).
69h	Enable level 2 cache
6Bh	Programming of the chip set register according to the BIOS set-up and auto-detection table.
6Dh	1. Assignment of resources for all ISA plug and play devices. 2. Assignment of the port address for onboard COM-ports (only if an automatic junction has been defined in the setup).
6Fh	1. Initialising of the floppy controller 2. Programming of all relevant registers and variables (floppy and floppy controller).
73h	Optional feature: Call of AWDFLASH.EXE if: - the AWDFLASH program was found on a disk in the floppy drive. - the shortcut ALT+F2 was pressed.
75h	Detection and installation of the IDE drives: HDD, LS120, ZIP, CDROM...
77h	Detection of parallel and serial ports.
7Ah	Co-processor is detected and enabled.
7Fh	1. Switch over to the text mode, the logo output is supported. - Indication of possibly emerged errors. Waiting for keyboard entry. - No errors emerged, respective F1 key was pressed (continue): Deleting of the EPA- or own logo.
82h	1. Call the pointer to the "chip set power management". 2. Load the text font of the EPA-logo (not if a complete picture is displayed) 3. If a password is set, it is asked here.
83h	Saving of the data in the stack, back to CMOS.
84h	Initialising of ISA plug and play boot drives (also Boot-ROMs)
85h	1. Final initialising of the USB-host. 2. At network PC's (Boot-ROM): Construction of a SYSID structure table 3. Backspace the scope presentation into the text mode 4. Initialise the ACPI table (top of memory). 5. Initialise and link ROMs on ISA cards 6. Assignment of PCI-IRQs 7. Initialising of the advanced power management (APM) 8. Set back the IRQ-register.

Code	Description
93h	Reading in of the hard disk boot sector for the inspection through the internal anti virus program (trend anti virus code)
94h	<ol style="list-style-type: none"> 1. Enabling of level 2 cache 2. Setting of the clock speed during the boot process 3. Final initialising of the chip set. 4. Final initialising of the power management. 5. Erase the onscreen and display the overview table (rectangular box). 6. Program "write allocation" at K6 CPUs (AMD) 7. Program "write combining" at P6 CPUs (INTEL)
95h	<ol style="list-style-type: none"> 1. Program the changeover of summer-and winter-time 2. Update settings of keyboard-LED and keyboard repeat rates
96h	<ol style="list-style-type: none"> 1. Multi processor system: generate MP-table 2. Generate and update ESCD-table 3. Correct century settings in the CMOS (20xx or 19xx) 4. Synchronise the DOS-system timer with CMOS-time 5. Generate an MSIRQ-Routing table..
C0h	Chip set initialising: <ul style="list-style-type: none"> - Cut off shadow RAM - Cut off L2 cache (apron 7 or older) - Initialise chip set register
C1h	Memory detection: <ul style="list-style-type: none"> Auto detection of DRAM size, type and error correction (ECC or none) Auto detection of L2 cache size (apron 7 or older)
C3h	Unpacking of the packed BIOS program codes into the random access memory.
C5h	Copying of the BIOS program code into the shadow RAM (segments E000 & F000) via chipset hook.
CFh	Testing of the CMOS read/write functionality
FFh	Boot trial over boot-loader-routine (software-interrupt INT 19h)

II Annex: Resources

A IO Range

The used resources depend on setup settings.

The given values are ranges, which are fixed by AT compatibility. Other IO ranges are used, which are dynamically adjusted by Plug & Play BIOS while booting.

Address	Function
0-FF	Reserved IO area of the board
170-17F	IDE2
1F0-1F7	IDE1
278-27F	LPT2
2E8-2EF	COM4
2F8-2FF	COM2
370-377	FDC2
378-37F	LPT1
3BC-3BF	LPT3
3E8-3EF	COM3
3F0-3F7	FDC1
3F8-3FF	COM1

B Memory Range

The used resources depend on setup settings.

If the entire range is clogged through option ROMs, these functions do not work anymore.

Address	Function
A0000-BFFFF	VGA RAM
C0000-CFFFF	VGA BIOS
D0000-DFFFF	AHCI BIOS / RAID / PXE (if available)
E0000-EFFFF	System BIOS while booting
F0000-FFFFF	System BIOS

C Interrupt

The used resources depend on setup settings.

The listed interrupts and their use are given through AT compatibility.

If interrupts must exclusively be available on the ISA side, they have to be reserved through the BIOS setup. The exclusivity is not given and not possible on the PCI side.

Address	Function
IRQ0	Timer
IRQ1	PS/2 Keyboard
IRQ2 (9)	(COM3)
IRQ3	COM1
IRQ4	COM2
IRQ5	(COM4)
IRQ6	FDC
IRQ7	LPT1
IRQ8	RTC
IRQ9	
IRQ10	
IRQ11	

Address	Function
IRQ12	PS/2 Mouse
IRQ13	FPU
IRQ14	IDE Primary
IRQ15	(IDE Secondary)

D PCI Devices

All listed PCI devices exist on the board. Some PCI devices or functions of devices may be disabled in the BIOS setup. Once a device is disabled other devices may get PCI bus numbers different from the ones listed in the table.

AD	INTA	REQ	PCI	Dev.	Fct.	Controller / Slot
	-	-	0	0	0	Host Bridge ID3580
	-	-	0	0	1	ID3584
	-	-	0	0	3	ID3585
	A	-	0	2	0	VGA Graphics ID3582
	-	-	0	2	1	Graphics Controller ID3582
	A	-	0	29	0	USB UHCI Controller #1 ID24C2
	D	-	0	29	1	USB UHCI Controller #2 ID24C4
	C	-	0	29	2	USB UHCI Controller #3 ID24C7
	H	-	0	29	7	USB 2.0 EHCI Controller ID24CD
	-	-	0	30	0	Hub Interface to PCI Bridge ID244E
	-	-	0	31	0	PCI to LPC Bridge ID24C0
	C	-	0	31	1	IDE Controller ID24CB
	B	-	0	31	3	SMBus Controller ID24C3
	B	-	0	31	5	AC '97 Audio Controller ID24C5
	B	-	0	31	6	AC '97 Modem Controller ID24C6
17	E	4	1 or 2	1	0	LAN Intel 82551ER ID1209
20	A	0	1 or 2	4		External Slot 1
21	B	1	1 or 2	5		External Slot 2
22	C	2	1 or 2	6		External Slot 3
23	D	3	1 or 2	7		External Slot 4
24	E	-	1 or 2	8	0	LAN intern ICH4 ID103A

E SMB Devices

The following table contains all reserved SM-Bus device addresses in 8-bit notation. Note that external devices must not use any of these addresses even if the component mentioned in the table is not present on the motherboard.

Address	Function
10-11	Standard slave address
40-41	GPIO
60-61	BIOS internal
70-73	POST code output
88-89	BIOS-defined slave address
A0-A1	DIMM 1
A2-A3	DIMM 2
A4-AF	BIOS internal
B0-BF	BIOS internal
D2-D3	Clock
