### NOTE

All company names, brand names, and product names referred to in this manual are registered or unregistered trademarks of their respective holders and are, as such, protected by national and international law.

# 1 Introduction

## 1.1 Important Notes

Please read this manual carefully before you begin installation of this hardware device. To avoid Electrostatic Discharge (ESD) or transient voltage damage to the board, adhere to the following rules at all times:

- You must discharge your body from electricity before touching this board.
- Tools you use must be discharged from electricity as well.
- Please ensure that neither the board you want to install, nor the unit on which you want to install this board, is energized before installation is completed.
- Please do not touch any devices or components on the board.

### CAUTION

As soon as the board is connected to a working power supply, touching the board may result in electrical shock, even if the board has not been switched on yet. Please also note that the mounting holes for heat sinks are connected to ground, so when using an externally AC powered device, a substantial ground plane differential can occur if the external device's AC power supply or cable does not include an earth ground. This could also result in electrical shock when touching the device and the heat sink simultaneously.

## 1.2 Technical Support

Technical support for this product can be obtained in the following ways:

- By contacting our support staff at +1 858-490-0597 or +49 (0) 271 250 810 0
- By contacting our staff via e-mail at [support@adl-usa.com](mailto:support@adl-usa.com) or [support@adl-europe.com](mailto:support@adl-europe.com)
- Via our website at [www.adl-usa.com/support](http://www.adl-usa.com/support) or [www.adl-europe.com/support](http://www.adl-europe.com/support)

## 1.3 Warranty

This product is warranted to be free of defects in workmanship and material. ADL Embedded Solutions' sole obligation under this warranty is to provide replacement parts or repair services at no charge, except shipping cost. Such defects which appear within 12 months of original shipment of ADL Embedded Solutions will be covered, provided a written claim for service under warranty is received by ADL Embedded Solutions no less than 30 days prior to the end of the warranty period or within 30 days of discovery of the defect – whichever comes first. Warranty coverage is contingent upon proper handling and operation of the product. Improper use such as unauthorized modifications or repair, operation outside of specified ratings, or physical damage may void any service claims under warranty.

## 1.4 Return Authorization

All equipment returned to ADL Embedded Solutions for evaluation, repair, credit return, modification, or any other reason must be accompanied by a Return Material Authorization (RMA) number. ADL Embedded Solutions requires a completed RMA request form to be submitted in order to issue an RMA number. The form can be found under the Support section at our website: [www.adl-usa.com](http://www.adl-usa.com) or [www.adl-europe.com](http://www.adl-europe.com). Submit the completed form to [support@adl-usa.com](mailto:support@adl-usa.com) or fax to +1 858-490-0599 for the USA office, or to [rma@adl-europe.com](mailto:rma@adl-europe.com) or fax to +49 (0) 271 250 810 20 to request an RMA from the European office in Germany. Following a review of the information provided, ADL Embedded Solutions will issue an RMA number.

## 1.5 Description of Safety Symbols

The following safety symbols are used in this documentation. They are intended to alert the reader to the associated safety instructions.

### ***ACUTE RISK OF INJURY!***

If you do not adhere to the safety advise next to this symbol, there is immediate danger to life and health of individuals!

### ***RISK OF INJURY!***

If you do not adhere to the safety advise next to this symbol, there is danger to life and health of individuals!

### ***HAZARD TO INDIVIDUALS, ENVIRONMENT, DEVICES, OR DATA!***

If you do not adhere to the safety advise next to this symbol, there is obvious hazard to individuals, to environment, to materials, or to data.

### ***NOTE OR POINTER***

This symbol indicates information that contributes to better understanding.

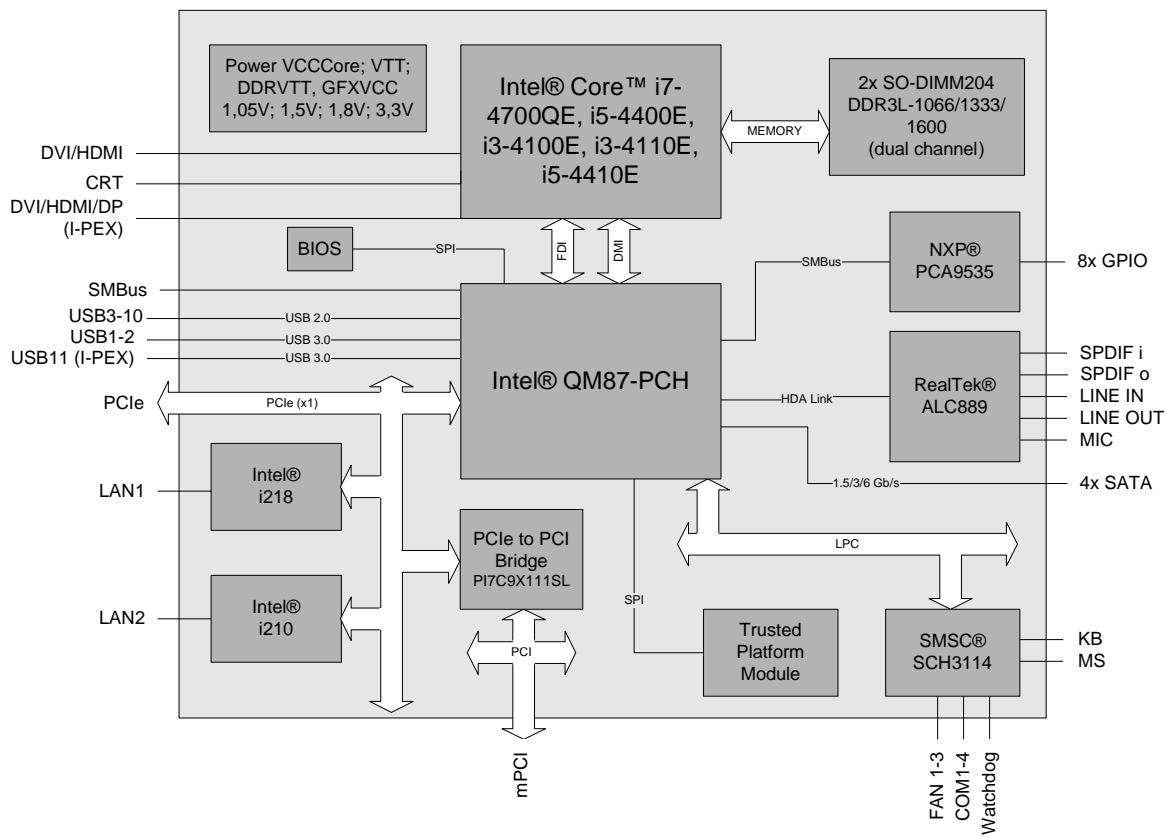

## 1.6 RoHS

The PCB and all components are RoHS compliant (RoHS = Restriction of Hazardous Substances Directive). The soldering process is lead free.

## 2 Overview

### 2.1 Features

The ADLQM87HD is a highly complex 3,5-inch board which incorporates complete motherboard functionality. It's based on Intel®'s QM87 chipset combined with Intel® CPUs of the 4th Generation Core™ families. Modern low voltage DDR3L technology provides top-notch memory performance, accommodating up to 16 GByte of RAM (DDR3L-1600) via SO-DIMM204. It also provides a PCI bus (via mPCI connector), a PCI-Express bus (via a 2x40 pin custom connector) and additional peripheral devices such as four serial interfaces, two Gigabit Ethernet interfaces (LAN), four SATA channels (two of which offering up to 6Gb/s), an audio interface (HDA 5.1), eleven USB channels, and two DVI/HDMI connectors with CRT available through DVI-I, and DisplayPort available on a 30pin I-PEX connector. In addition the board serves via the integrated Trusted Platform Module as Trusted Computing Platform and provides essential safety functions.

- Suitable CPUs: Intel® Core™ i7-4700QE, i5-4400E, i3-4100E, i3-4110E, i5-4410E
- Chipset Intel® QM87 PCH
- Two SO-DIMM204-sockets for up to 16 GByte DDR3L-1600
- PCI bus via mPCI connector
- PCI-Express bus (four x1 or one x4) via 2x40pin custom connector
- Four serial interfaces COM1 to COM4
- Two LAN interfaces Ethernet 10/100/1000 (Base-T)
- Four SATA channels (2x 1.5/3/6Gb/s, 2x 1.5/3 Gb/s transfer rate)
- PS2 keyboard / mouse interface
- 11 USB 2.0 interfaces (4x external, 6x internal, 1x on I-PEX connector)

## Chapter: Overview

## Features

- BIOS AMI® Aptio
- CRT connection
- Two DVI/HDMI connectors (1x DVI-I, 1x I-PEX MiniCoax DVI/HCMI/DP)
- HDA compatible sound controller with SPDIF in and out
- 8x GPIO
- TPM Modul
- Watchdog
- RTC with external CMOS battery
- Three regulated fan connectors
- 5V supply
- Format: 102 mm x 147 mm

## 2.2 Specifications and Documents

In making this manual and for further reading of technical documentation, the following documents, specifications and web-pages were used and are recommended.

### 3 Connectors

This section describes all the connectors found on the ADLQM87HD.

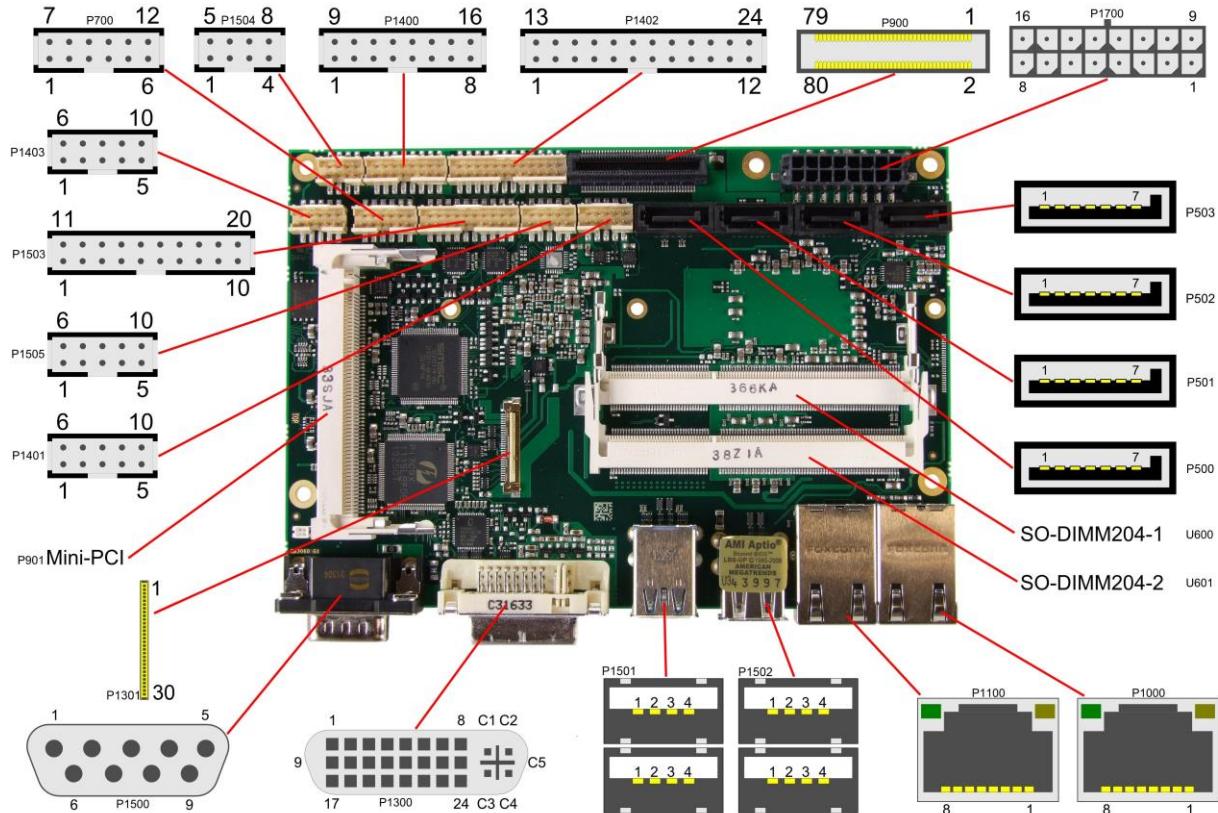

#### **CAUTION**

For most interfaces, the cables must meet certain requirements. For instance, USB 2.0 requires twisted and shielded cables to reliably maintain full speed data rates. Restrictions on maximum cable length are also in place for many high speed interfaces and for power supply. Please refer to the respective specifications and use suitable cables at all times.

### 3.1 Connector Map

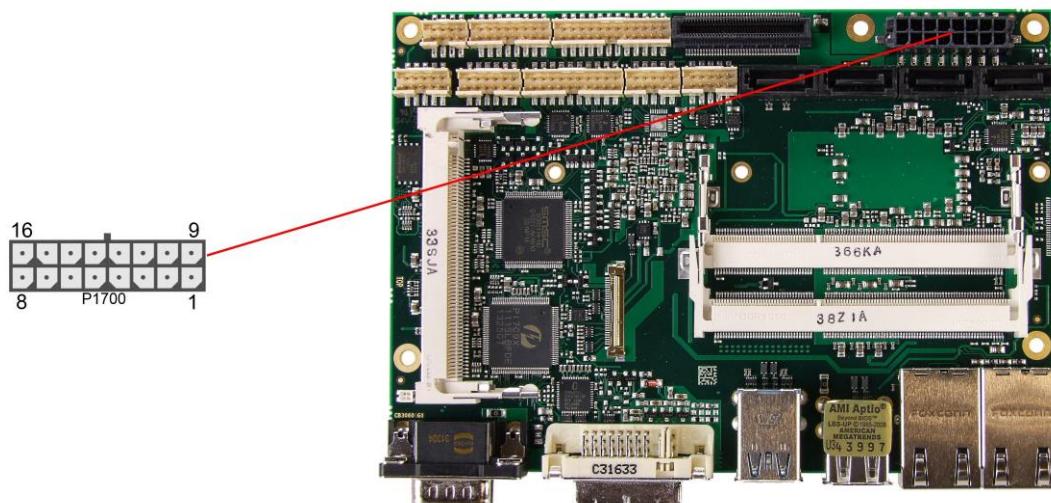

Please use the connector map below for quick reference. Only connectors on the component side are shown. For more information on each connector refer to the table below.

Ref-No.	Function	Page
P500/1/2/3	"SATA Interfaces"	p. 27
U600/1	"Memory"	p. 16
P700	"GPIO"	p. 35
P900	"PCI-Express"	p. 31
P901	"Mini-PCI"	p. 33
P1000/1100	"LAN"	p. 25
P1300	"VGA/DVI"	p. 19
P1301	"DVI/HDMI/DisplayPort"	p. 21
P1400/1504	"USB 5-10"	p. 24
P1401	"Fan Connectors"	p. 36
P1402	"System"	p. 15
P1403	"Audio"	p. 26
P1500	"Serial Interface COM1"	p. 28
P1503/5	"Serial Ports COM2 and COM4"	p. 29
P1501/2	"USB 1-4"	p. 23
P1700	"Power Supply"	p. 14

## 3.2 Power Supply

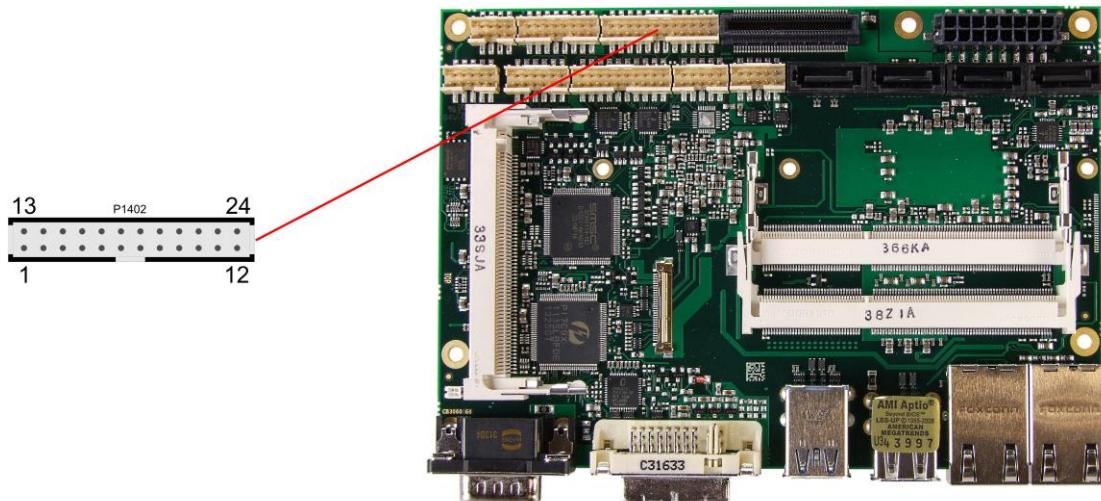

The power supply of the hardware module is realized via a 2x8-pin connector (Molex PS 43045-1619, mating connector: Molex PS 43025-16xx). The 12 volt supply is needed for PCI-Express cards and for the fan connector. COM3 RXD and TXD can also be used for connecting a second power supply unit, e. g. for UPS. As an ordering option SMBus signals SCL/SDA can be provided (replacing COM3 TXD/RXD).

Description	Name	Pin		Name	Description
COM3 transmit data	TXD	1	9	RXD	COM3 receive data
PSU on	PS-ON	2	10	PWRGD	Powergood
powerbutton PSU	PWRBTN#	3	11	SVCC	standby-supply 5V
12 volt supply	12V	4	12	12V	12 volt supply
ground	GND	5	13	GND	ground
ground	GND	6	14	GND	ground
5 volt supply	VCC	7	15	VCC	5 volt supply
5 volt supply	VCC	8	16	VCC	5 volt supply

### 3.3 System

A number of signals for system control and for SMBus communication are provided through a 2x12 pin connector (FCI 98424-G52-24LF, mating connector FCI 90311-024LF). This connector combines signals for power button, reset, keyboard, speaker, and several LEDs such as harddisk LED, and suspend LED, and three additional LEDs which are driven by GPIOs. Of these three GPIO-LEDs, LED1 and LED2 are already provided with a series resistor. SMBus capable devices can also be connected.

Pinout 2x12pin connector:

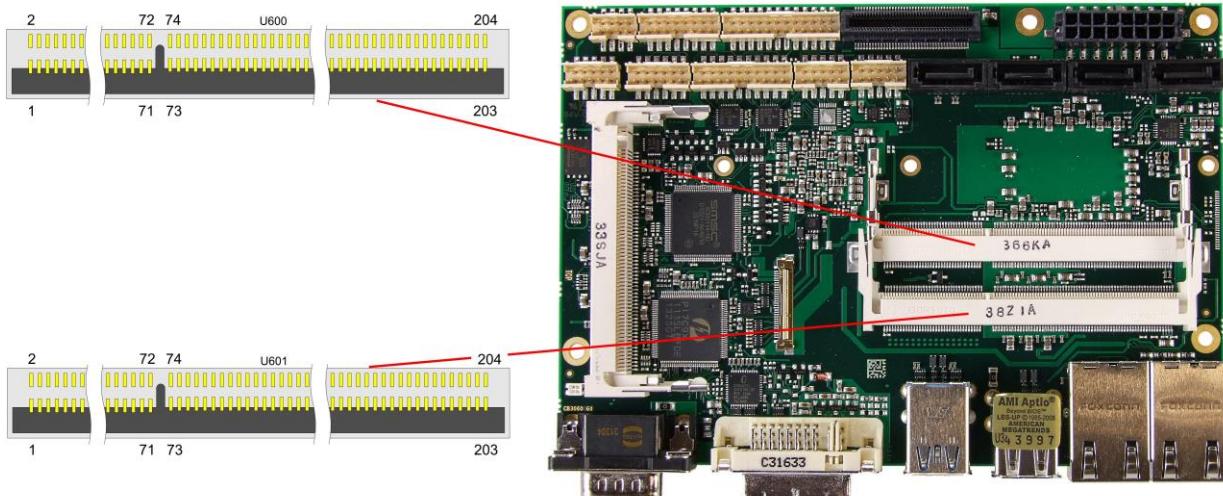

Description	Name	Pin	Name	Description
ground	GND	1	13	3.3V
reset to ground	RSTBTN#	2	14	PWRBTN#
LED suspend / ACPI	S-LED	3	15	S3.3V
LED harddisk	SATALED	4	16	GPIOLED3
LED GPIO device 1	GPIOLED1	5	17	BATT
LED GPIO device 2	GPIOLED2	6	18	SMBALERT#
SMB Clock	SMBCLKEX	7	19	SMBDATEX
speaker to 5V	SPEAKER	8	20	SVCC
keyboard clock	KCLK	9	21	KDAT
ground	GND	10	22	VCC
ground	GND	11	23	VCC
ground	GND	12	24	VCC

### 3.4 Memory

Conventional SO-DIMM204 memory modules, as familiar from notebook computers, are used to equip the board with memory. For technical and mechanical reasons it is possible that particular memory modules cannot be employed. Please ask your distributor for recommended memory modules.

With currently available SO-DIMM204 modules a memory extension up to 16 GByte is possible (DDR3L-1600).

All timing parameters for different memory modules are automatically set by BIOS.

Pinout SO-DIMM204:

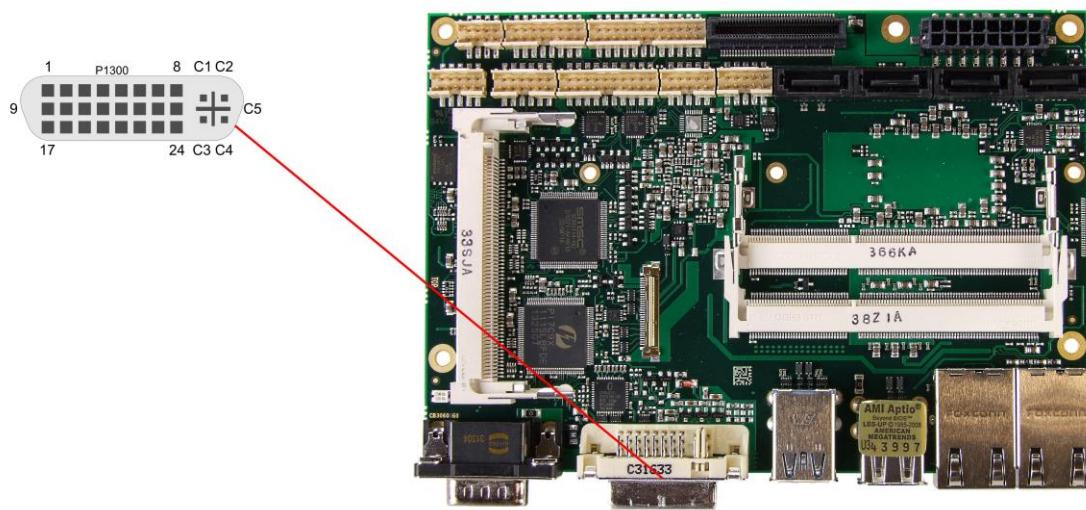

Description	Name	Pin		Name	Description
memory reference current	REF-DQ	1	2	GND	ground

### 3.5 VGA/DVI

The module is equipped with a standard DVI-I-connector, which can be used to connect a DVI capable device, a standard VGA monitor or an HDMI capable device. External cable adapters that convert from DVI to VGA or HDMI are required to connect standard VGA or HDMI devices.

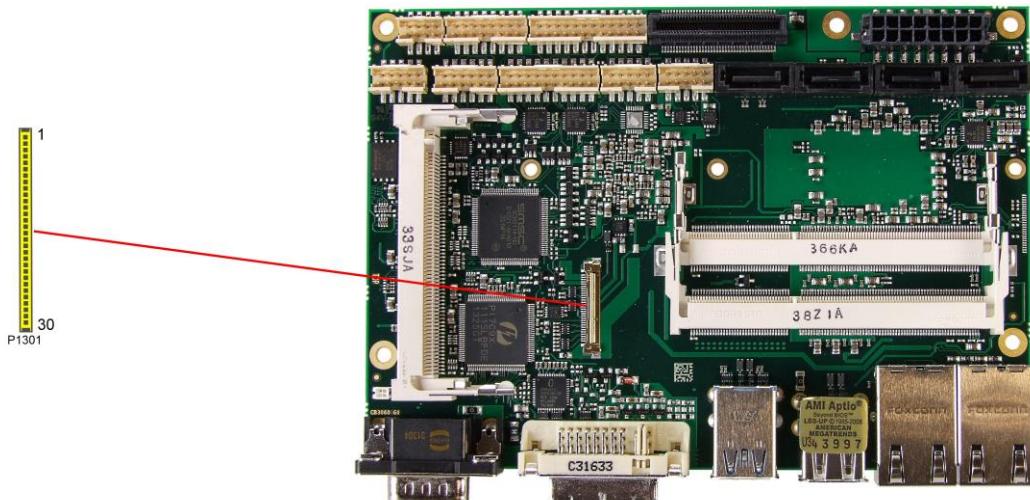

Pinout DVI-I:

Pin	Name	Description
1	TMDSDAT2#	DVI data 2 -
2	TMDSDAT2	DVI data 2 +
3	GND	ground
4	N/C	reserved
5	N/C	reserved
6	DDC CLK	DDC clock (DVI/VGA)
7	DDC DAT	DDC data (DVI/VGA)
8	VSYNC	VGA vertical sync
9	TMDSDAT1#	DVI data 1 -
10	TMDSDAT1	DVI data 1 +
11	GND	ground
12	N/C	reserved
13	N/C	reserved
14	VCC	5 volt supply
15	GND	ground
16	HP_DETECT	hot plug detect

21	N/C	reserved
22	GND	ground
23	TMDS CLK	DVI clock
24	TMDS CLK#	DVI clock
C1	RED	VGA red
C2	GREEN	VGA green
C3	BLUE	VGA blue
C4	HSYNC	VGA horizontal sync

Pin	Name	Description
C5	GND	ground

### 3.6 DVI/HDMI/DisplayPort

The ADLQM87HD provides a second DVI interface which is realized as a 30pin flat cable header (I-PEX Cabline-VS 20455-030E-12). Analog VGA is not available on this connector. However, an HDMI device or DisplayPort device can be connected. This custom connector also carries an additional USB interface. Please note that a custom cable design is required.

Pinout 30pin connector DVI/HDMI/DisplayPort:

Pin	Name	Description
1	TMDS0#/DP2#	DVI Data 0 - / DP Lane 2 -
2	TMDS0/DP2	DVI Data 0 + / DP Lane 2 +
3	TMDS1#/DP1#	DVI Data 1 - / DP Lane 1 -
4	TMDS1/DP1	DVI Data 1 + / DP Lane 1 +
5	TMDS2#/DP0#	DVI Data 2 - / DP Lane 0 -
6	TMDS2/DP0	DVI Data 2 + / DP Lane 0 +
7	TMDSCLK#/DP3#	DVI Clock - / DP Lane 3 -
8	TMDSCLK/DP3	DVI Clock + / DP Lane 3 +
9	N/C	reserved
10	SEL_DVI/DP#	DVI-DisplayPort Select
11	DDCK/DPAUX	EDID Clock / DP Aux +
12	DDDA/DPAUX#	EDID Data / DP Aux -
13	VCC	5V supply
14	GND	ground
15	HPD	hot plug detect
16	USBVCC	5V supply for USB
17	USBVCC	5V supply for USB
18	N/C	reserved
19	N/C	reserved
20	SSTX#	Super Speed receiver -
21	SSTX	Super Speed receiver +
22	USB#	USB -

25	SSRX	Super Speed transmitter
26	3.3V	3.3V supply
27	3.3V	3.3V supply

Pin	Name	Description
28	VCC	5V supply
29	VCC	5V supply
30	VCC	5V supply

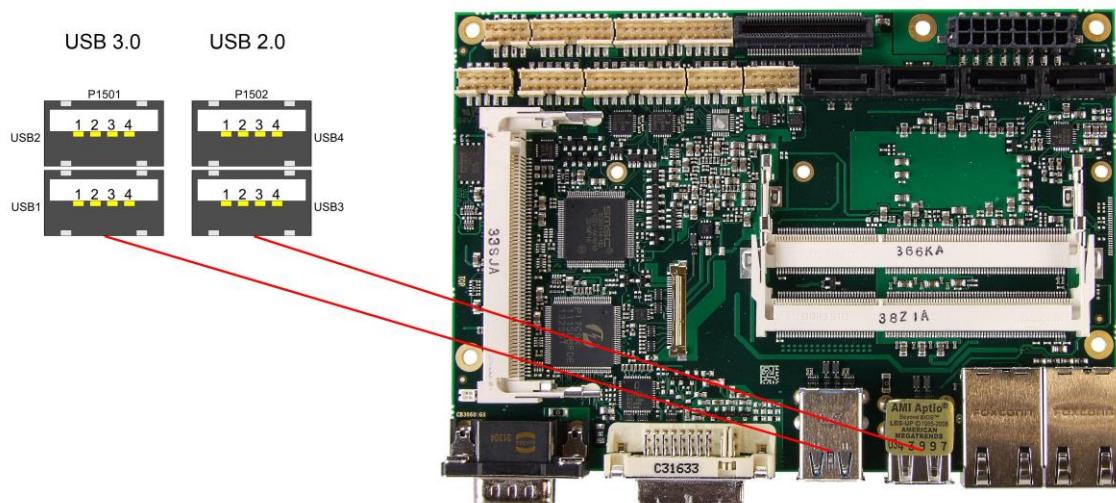

### 3.7 USB 1-4

The USB channels 1 to 4 are available as standard USB connectors.

The USB channels 1 and 2 support USB 3.0, the USB channels 3 and 4 support USB 2.0.

You may note that the setting of USB keyboard or USB mouse support in the BIOS-setup is only necessary and advisable, if the OS offers no USB-support. BIOS-setup can be changed with a USB keyboard without enabling USB keyboard support. Running Windows with these features enabled may lead to significant performance or functionality limitations.

Each USB 2.0 interface provides up to 500 mA current. The USB 3.0 interfaces provide up to 900mA current. All interfaces are protected by an electronically resettable fuse.

Pinout USB connector for channel X:

Pin	Name	Description
1	VCC	5 volt for USBX
2	USBX#	minus channel USBX
3	USBX	plus channel USBX
4	GND	ground

Pinout USB3.0 connector for channel X:

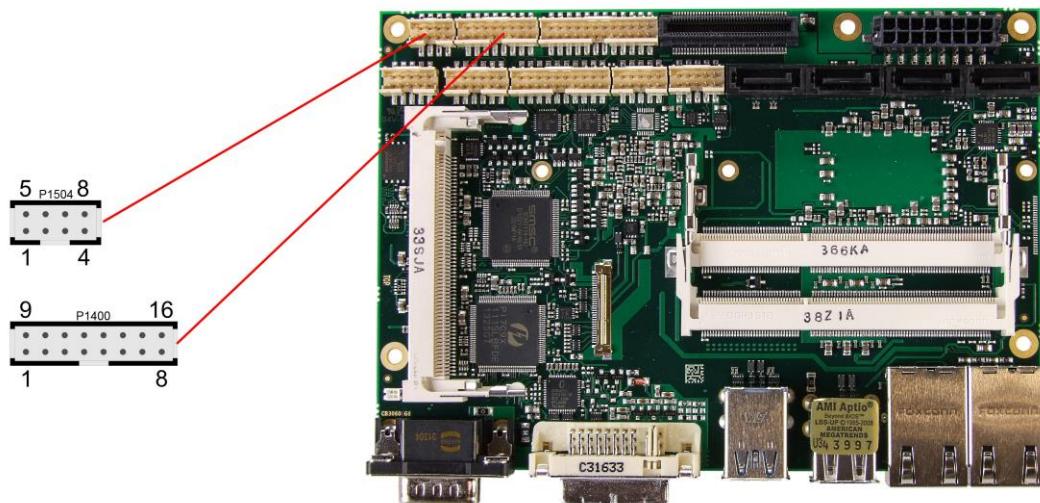

Pin	Name	Description
1	VCC	5 volt for USBX
2	USBX#	Minus channel USBX
3	USBX	Plus channel USBX
4	GND	ground
5	StdA_SSRX-	SuperSpeed Receiver -
6	StdA_SSRX+	SuperSpeed Receiver +
7	GND	ground
8	StdA_SSTX-	SuperSpeed Transmitter -
9	StdA_SSTX+	SuperSpeed Transmitter +

### 3.8 USB 5-10

The USB channels 5 to 10 are provided via two connectors, one of which is 2x4pin (FCI 98424-G52-08LF, mating connector FCI 90311-08LF), the other 2x8pin (FCI 98424-G52-16LF, mating connector FCI 90311-016LF).

The USB channels support USB 2.0. You may note that the setting of USB keyboard or USB mouse support in the BIOS-setup is only necessary and advisable, if the OS offers no USB-support. BIOS-setup can be changed with a USB keyboard without enabling USB keyboard support. Running Windows with these features enabled may lead to significant performance or functionality limitations.

Every USB interface provides up to 500 mA current and is protected by an electronically resettable fuse.

Pinout USB

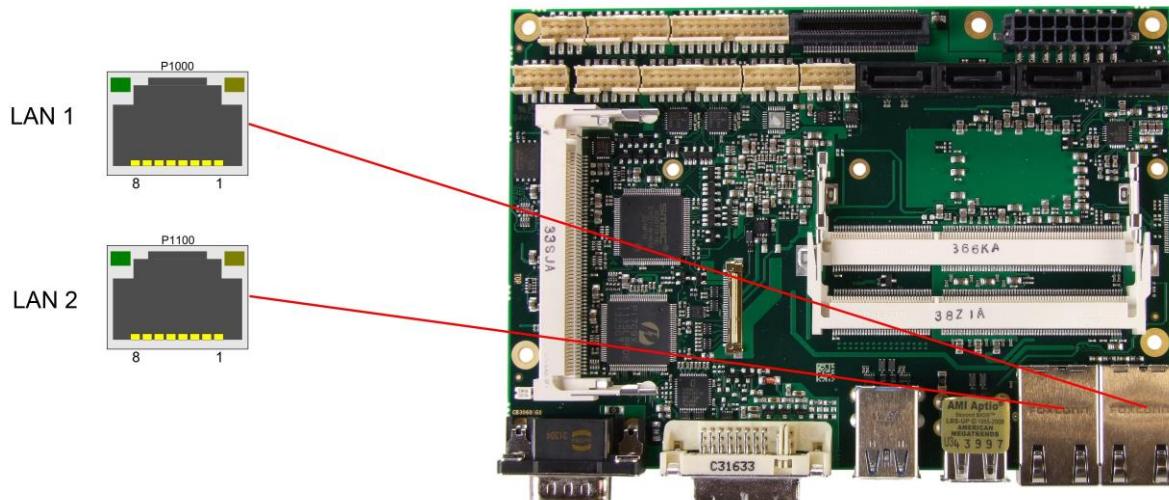

Description	Name	Pin		Name	Description
5 volt for USB5	VCC	1	9	VCC	5 volt for USB6
minus channel USB5	USB5-	2	10	USB6-	minus channel USB6
plus channel USB5	USB5+	3	11	USB6+	plus channel USB6
ground	GND	4	12	GND	ground
ground	GND	5	13	GND	ground
plus channel USB7	USB7+	6	14	USB8+	plus channel USB8
minus channel USB7	USB7-	7	15	USB8-	minus channel USB8
5 volt for USB7	VCC	8	16	VCC	5 volt for USB8

Pinout USB 9/10

Description	Name	Pin		Name	Description
5 volt for USB9	VCC	1	5	VCC	5 volt for USB10
minus channel USB9	USB9-	2	6	USB10-	minus channel USB10
plus channel USB9	USB9+	3	7	USB10+	plus channel USB10
ground	GND	4	8	GND	ground

### 3.9 LAN

Both LAN interfaces are provided via a 8pole standard connector (JFM3811F-2101-4F). The interfaces support 10BaseT, 100BaseT, and 1000BaseT compatible network components with automatic bandwidth selection. Additional outputs are provided for status LEDs. Auto-negotiate and auto-cross functionality is available as is PXE and WOL. Controller chips are Intel®'s i218 (PHY, LAN1) and i210 (MAC/PHY, LAN2).

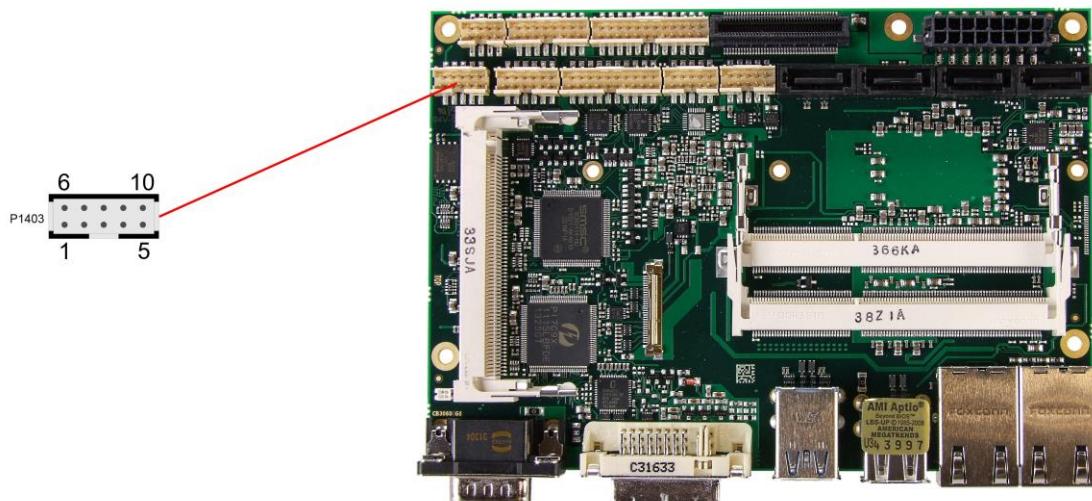

Pinout LAN 10/100/1000:

Pin	Name	Description
1	LAN-0	LAN channel 0 plus
2	LAN-0#	LAN channel 0 minus
3	LAN-1	LAN channel 1 plus
4	LAN-2	LAN channel 2 plus
5	LAN-2#	LAN channel 2 minus
6	LAN-1#	LAN channel 1 minus
7	LAN-3	LAN channel 3 plus
8	LAN-3#	LAN channel 3 minus

## 3.10 Audio

Audio input and output functions can be accessed via a 2x5 pin connector (FCI 98424-G52-10LF, mating connector FCI 90311-010LF). There are two ways to use this connector. Default functionality is the familiar audio in, audio out, and microphone. OS dependent device drivers can switch these signals to support a 5.1 output; thus in this mode no audio input signals are available.

Signals "SPDIFI" and "SPDIFO" provide digital input and output. If a transformation to a coaxial or optical connector is necessary this must be performed externally.

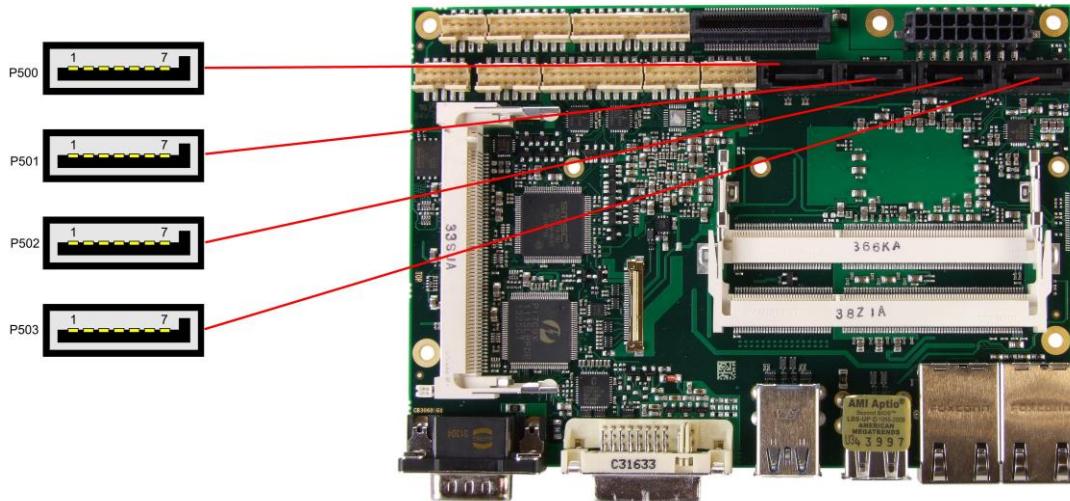

Pinout audio 2x5 pin connector:

Description	Name	Pin	Name	Description
digital output SPDIF	SPDIFO	1	6	3.3V
digital input SPDIF	SPDIFI	2	7	S_AGND
sound output right / front output right	LOUT_R / FRONT_R	3	8	LOUT_L / FRONT_L
AUX input right / rear output right	AUXA_R / REAR_R	4	9	AUXA_L / REAR_L
microphone input 1 / center output	MIC1 / CENTER	5	10	MIC2 / LFE
				microphone input 2 / LFE output

### 3.11 SATA Interfaces

The ADLQM87HD provides four SATA interfaces from which SATA 3 and 4 allow transfer rates of up to 3 Gb/s. Additionally SATA 1 and 2 allow transfer rates up to 6 Gb/s. All these interfaces are made available via a 7pin connector and support RAID 0/1/5/10.

The required settings are made in the BIOS setup.

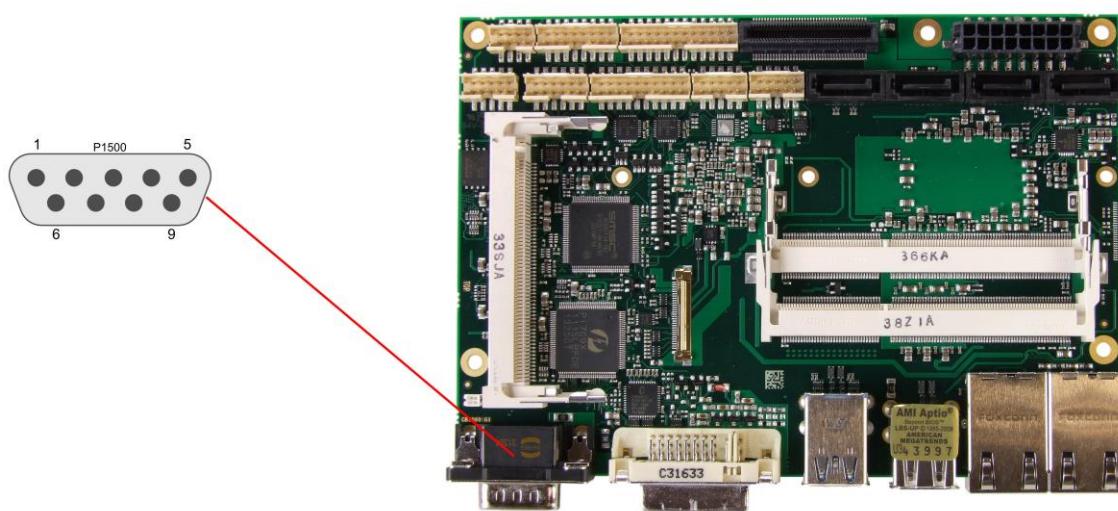

Pinout SATA:

Pin	Name	Description
1	GND	ground
2	SATATX	SATA transmit +
3	SATATX#	SATA transmit -
4	GND	ground
5	SATARX	SATA receive -
6	SATARX#	SATA receive +
7	GND	ground

### 3.12 Serial Interface COM1

The serial interface COM1 is made available via a 9-pin standard DSUB-connector (male, e.g. Foxconn DM10152-H5W3-4F). Signal level is RS232.

The port address and the interrupt are set via the BIOS setup.

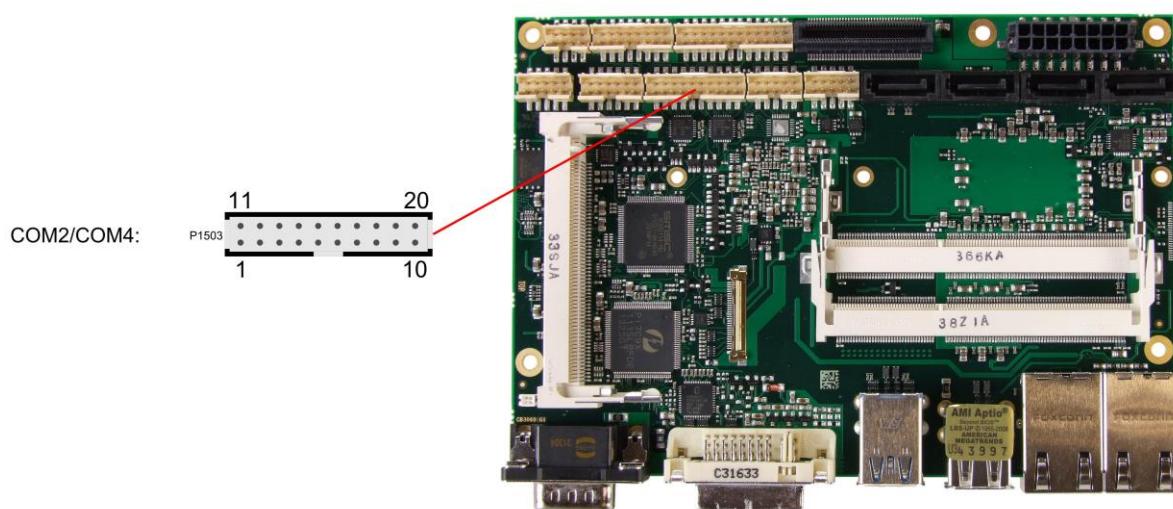

Pinout serial port (DSUB connector):

Description	Name	Pin		Name	Description
data carrier detect	DCD	1	6	DSR	data set ready
receive data	RXD	2	7	RTS	request to send
transmit data	TXD	3	8	CTS	clear to send
data terminal ready	DTR	4	9	RI	ring indicator
ground	GND	5			

### 3.13 Serial Ports COM2 and COM4

There are two more serial interfaces on the board. COM2 and COM4 are made available via a 2x10 pin connector (FCI 98424-G52-20LF, FCI 90311-020LF). Signal level is RS232.

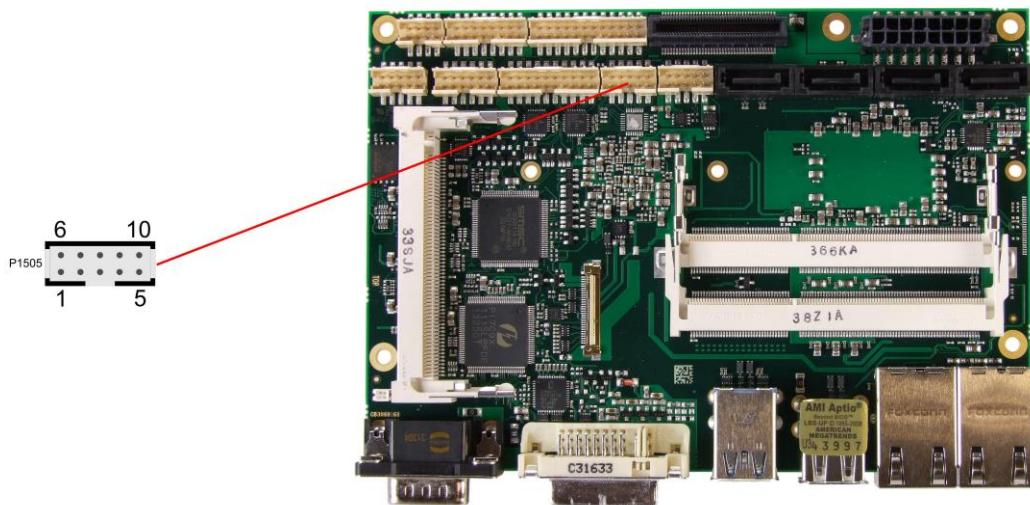

The port address and the interrupt are set via the BIOS setup.

Description	Name	Pin	Name	Description	
data carrier detect COM2	DCDB	1	11	DSRB	data set ready COM2
receive data COM2	RXDB	2	12	RTSB	request to send COM2
transmit data COM2	TXDB	3	13	CTSB	clear to send COM2
data terminal ready COM2	DTRB	4	14	RIB	ring indicator COM2
ground	GND	5	15	SVCC	5 volt supply
data carrier detect COM4	DCDD	6	16	DSRD	data set ready COM4
receive data COM4	RXDD	7	17	RTSD	request to send COM4
transmit data COM4	TXDD	8	18	CTSD	clear to send COM4
data terminal ready COM4	DTRD	9	19	RID	ring indicator COM4
ground	GND	10	20	SVCC	5 volt supply

### 3.14 Mouse and Keyboard

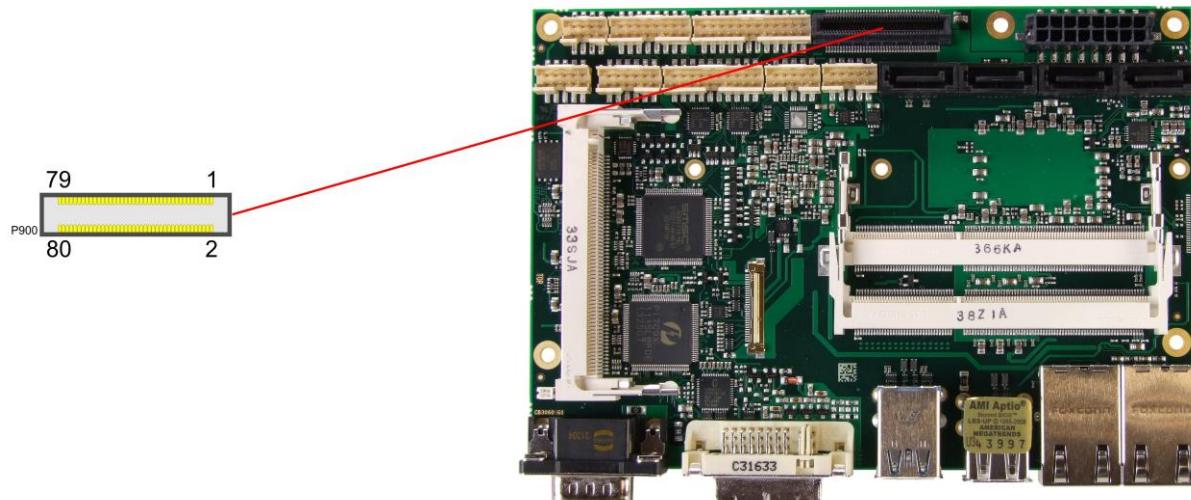

When the module is ordered in standard configuration, the 2x5pin connector (FCI 98424-G52-10LF, mating connector FCI 90311-010LF) offers mouse and keyboard signals.

Description	Name	Pin		Name	Description
keyboard clock	KCLK	1	6	MCLK	mouse clock
keyboard data	KDAT	2	7	MDAT	mouse data
reserved	N/C	3	8	N/C	reserved
reserved	N/C	4	9	N/C	reserved
ground	GND	5	10	3.3V	3.3 volt supply

### 3.15 PCI-Express

The ADLQM87HD offers a 2x40pin custom connector for the PCI-Express bus. You can connect one PCIe4x device here. Alternatively, up to four PCIe1x devices can be connected. Adapter cards featuring standard PCIe sockets or a PCIe Mini Card connector are available. Please contact your sales representative for these cards.

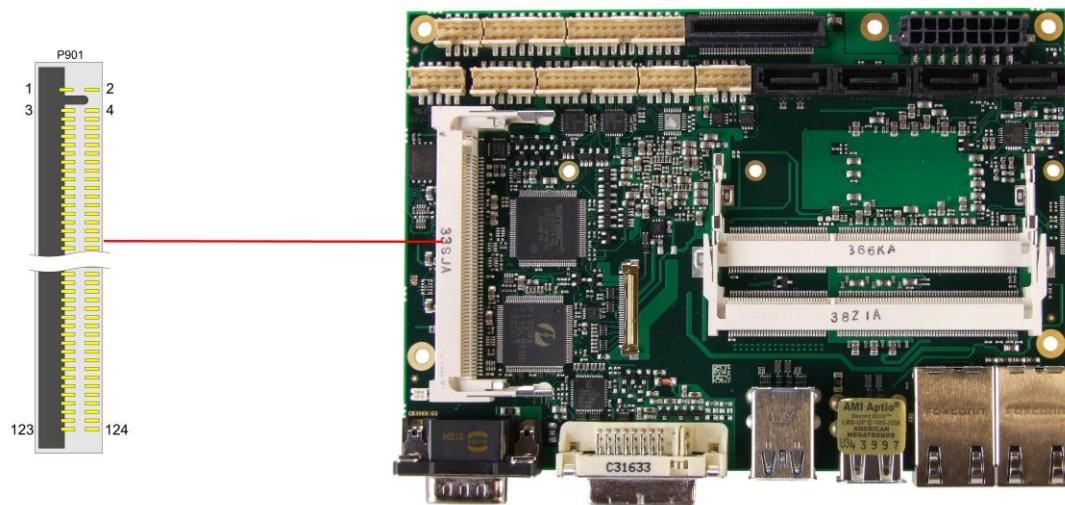

Pinout 2x40 pin connector PCIe:

Description	Name	Pin		Name	Description
3.3 volt supply	3.3V	1	2	12V	12 volt supply
3.3 volt stand-by	S3.3V	3	4	SMBCLK1	SMB clock slot 1

### 3.16 Mini-PCI

The ADLQM87HD allows you to add expansion cards complying to the Mini-PCI standard (type III). One such card can be inserted into the Mini-PCI slot available on the board.

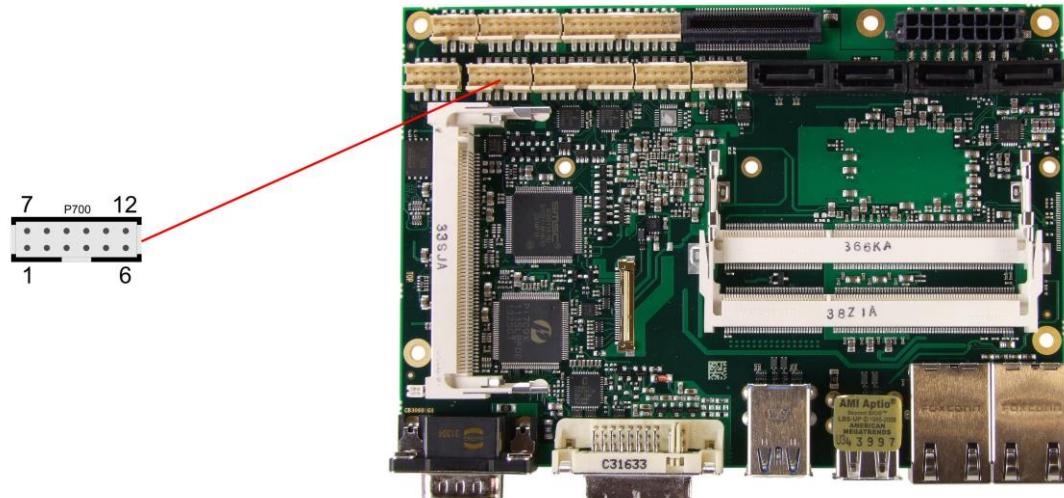

Description	Name	Pin	Name	Description
reserved	N/C	1	2	N/C
reserved	N/C	3	4	N/C

### 3.17 GPIO

The General Purpose Input/Output interface is made available through a 2x6 pin connector (FCI 98424-G52-12LF, mating connector FCI 90311-012LF). To make use of this interface the GPIO chip (PCA9535BS) must be programmed accordingly. Please refer to your distributor for information on available software support.

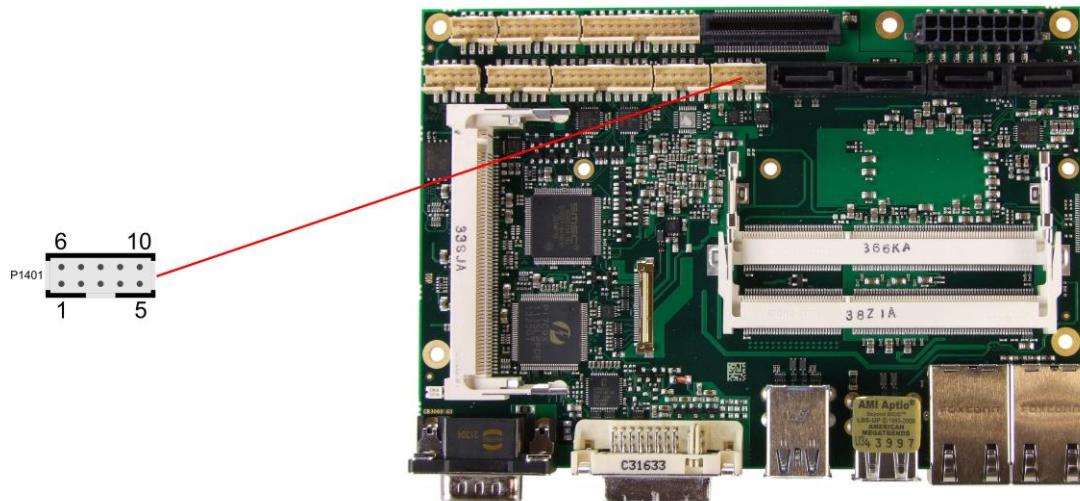

Pinout GPIO connector:

Description	Name	Pin		Name	Description
5 volt supply	VCC	1	7	VCC	5 volt supply
GP input/output 10	GPIO10	2	8	GPIO14	GP input/output 14
GP input/output 11	GPIO11	3	9	GPIO15	GP input/output 15
GP input/output 12	GPIO12	4	10	GPIO16	GP input/output 16
GP input/output 13	GPIO13	5	11	GPIO17	GP input/output 17
ground	GND	6	12	GND	ground

### 3.18 Fan Connectors

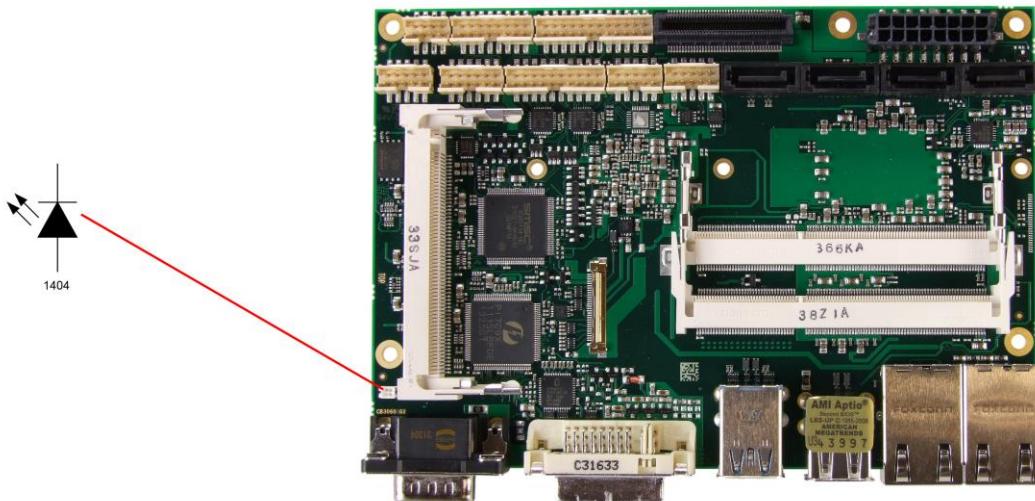

Three external fans (12V) can be connected to the board using a 2x5pin connector (FCI 98424-G52-10LF, mating connector FCI 90311-010LF). Monitoring signals are available. For the monitoring to work the fans must provide a corresponding speed signal.

Pinout fan connector:

Description	Name	Pin		Name	Description
ground	GND	1	6	GND	ground
12V regulated fan 1	FANON1	2	7	FANON2	12V regulated fan 2
monitoring signal fan 1	FANCTL1	3	8	FANCTL2	monitoring signal fan 2
12V regulated fan 3	FANON3	4	9	FANCTL3	monitoring signal fan 3
ground	GND	5	10	GND	ground

## 4 State LEDs

Status Codes RGB LED:

Color	Interval	Meaning
non	solid	Invalid system state
White	once	Powerfail
Cyan	solid	Reserved
Magenta	solid	if present: SUPS active
Blue	solid	Reserved
Yellow	solid	S5 state
Green	solid	S0 state
Red	solid	Reset/Start
Green/Yellow	flashing	Bootloader operates normal
Red/Yellow	flashing	Bootloader is being started (starting sequence still running)
Red/Magenta	flashing	Checksum error during i2C transmission in bootloader
Red/Blue	flashing	Update completed, waiting for manual Reset
Yellow	flashing (6s)	S4 state
Yellow	flashing (3s)	S3 state
Blue	flashing (0,5s)	if present: SUPS test of capacity

### NOTE

If the board appears to be in Reset (Red LED lit) then this could also indicate a PCI104-Express "stacking error". Such an error could occur when the stack contains a peripheral card which has the wrong type of connector (PCI104-Express Type 1 instead of Type 2 or vice versa).

## 5 BIOS Settings

### 5.1 General Remarks

In each setup page, standard values for all setup entries can be loaded. Previously saved settings are loaded by pressing F2 and factory defaults are loaded with F3. Both F2 and F3, and also F4 ("Save & Exit") always affect the whole set of setup entries.

Setup entries starting with a „►" sign represent submenus. Navigation between entries is done using the arrow keys on the keyboard, with the <Enter> key being used to select an entry, which either opens up a dialog box or opens a whole new submenu of setup entries.

Each setup entry has a short help text associated with it. This is displayed in the upper right hand corner of the screen.

#### NOTE

BIOS features and setup options are subject to change without notice. The settings displayed in the screenshots on the following pages are meant to be examples only. They do not represent the recommended settings or the default settings. Determination of the appropriate settings is dependent upon the particular application scenario in which the board is used.

## 5.8 BIOS-Update

If a BIOS update needs to be done, the program “DecdFlash” as well as a bootable medium which contains the newest BIOS version is used for this. It is important, that the program is started from a DOS environment without a virtual memory manager, for example “EMM386.EXE”. In case such a memory manager is loaded, the program will stop with an error message.

DecdFlash is a program which provides automatic BIOS updates on any AMI-BIOS boards. All files need to be copied from the .zip-file in another directory.

The system may not be interrupted during the flash process, otherwise the update is stopped and the BIOS is destroyed afterwards.

The program should be started as follows:

```
DecdFlsh BIOS-Filename
```

After checking the name of the BIOS file and its length the BIOS will be programmed.

The flashing takes nearly 75 seconds. The firmware will get updated automatically.

### CAUTION

Updating the BIOS in an improper way can render the board unusable. Therefore, you should only update the BIOS if you really need the changes/corrections which come with the new BIOS version.

### CAUTION

Before you proceed to update the BIOS you need to make absolutely sure that you have the right BIOS file which was issued for the exact board and exact board revision that you wish to update. If you try to update the BIOS using the wrong file the board will not start up again.

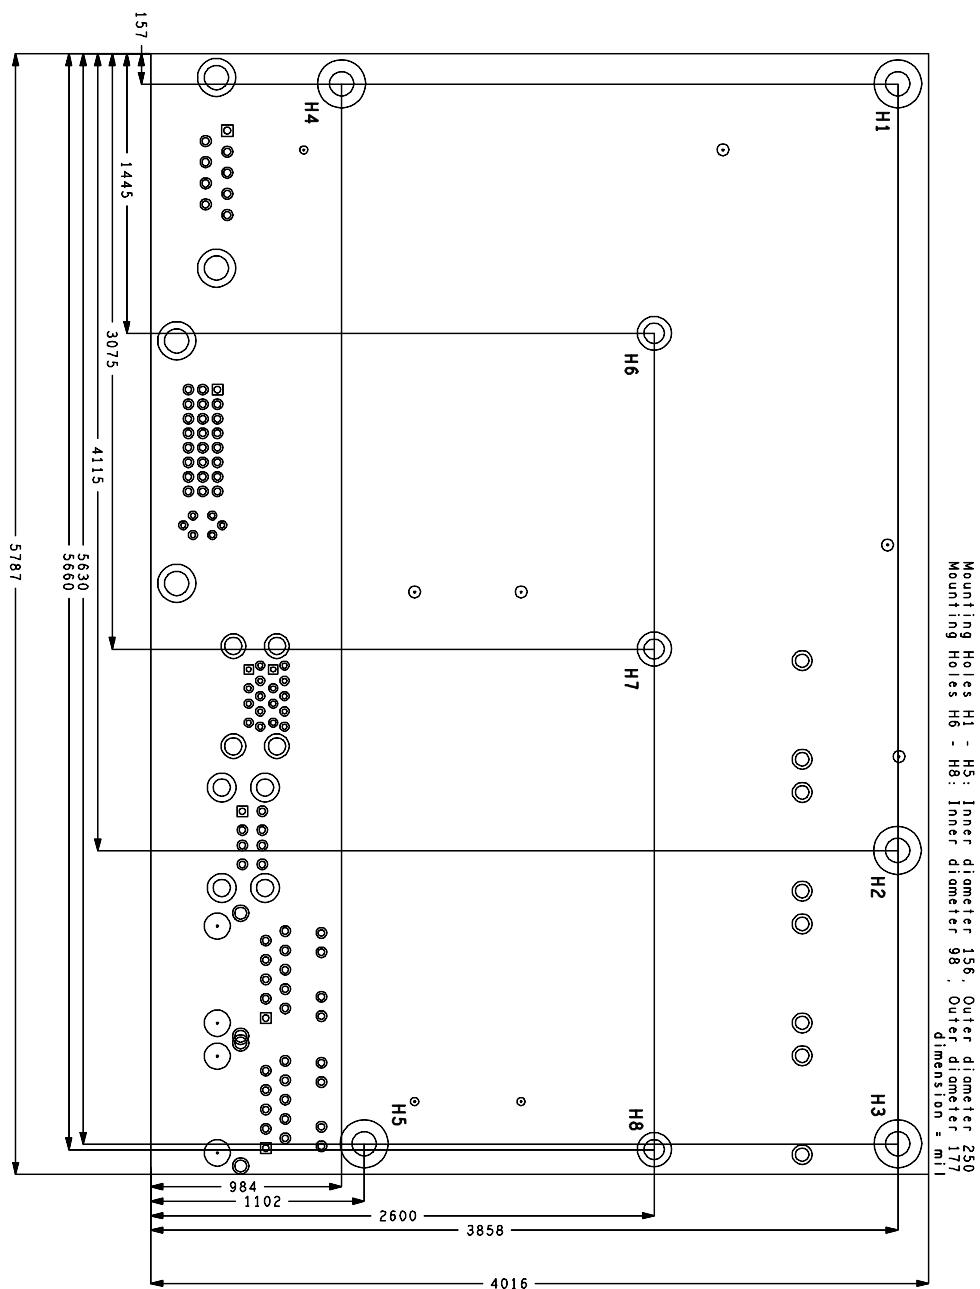

## 6 Mechanical Drawings

### 6.1 PCB: Mounting Holes

#### NOTE

All dimensions are in mil (1 mil = 0,0254 mm)

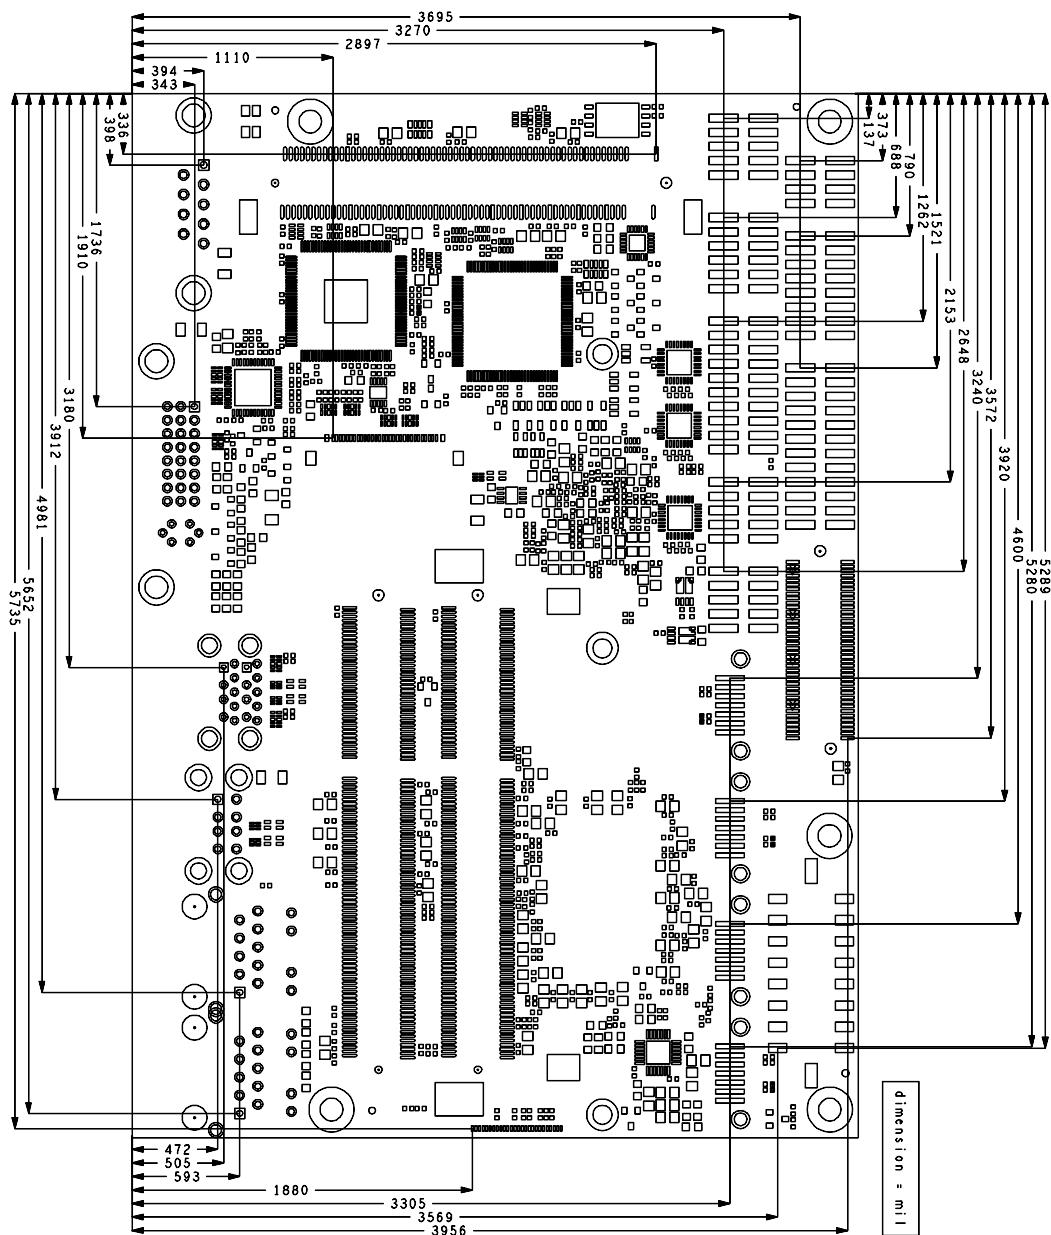

## 6.2 PCB: Pin 1 Dimensions - Top

### Note

All dimensions are in mil (1 mil = 0,0254 mm)

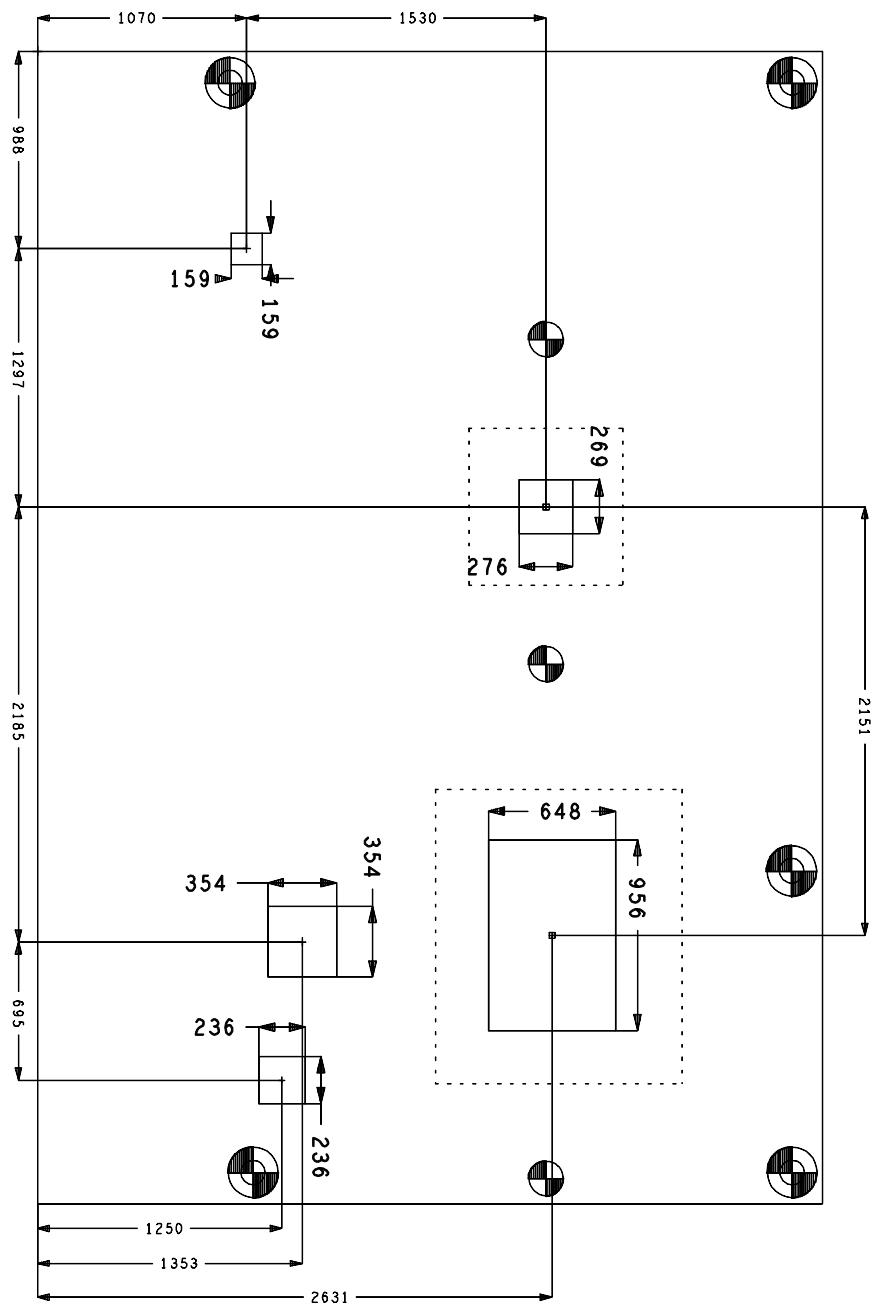

### 6.3 PCB: Die Center

#### Note

All dimensions are in mil (1 mil = 0,0254 mm)

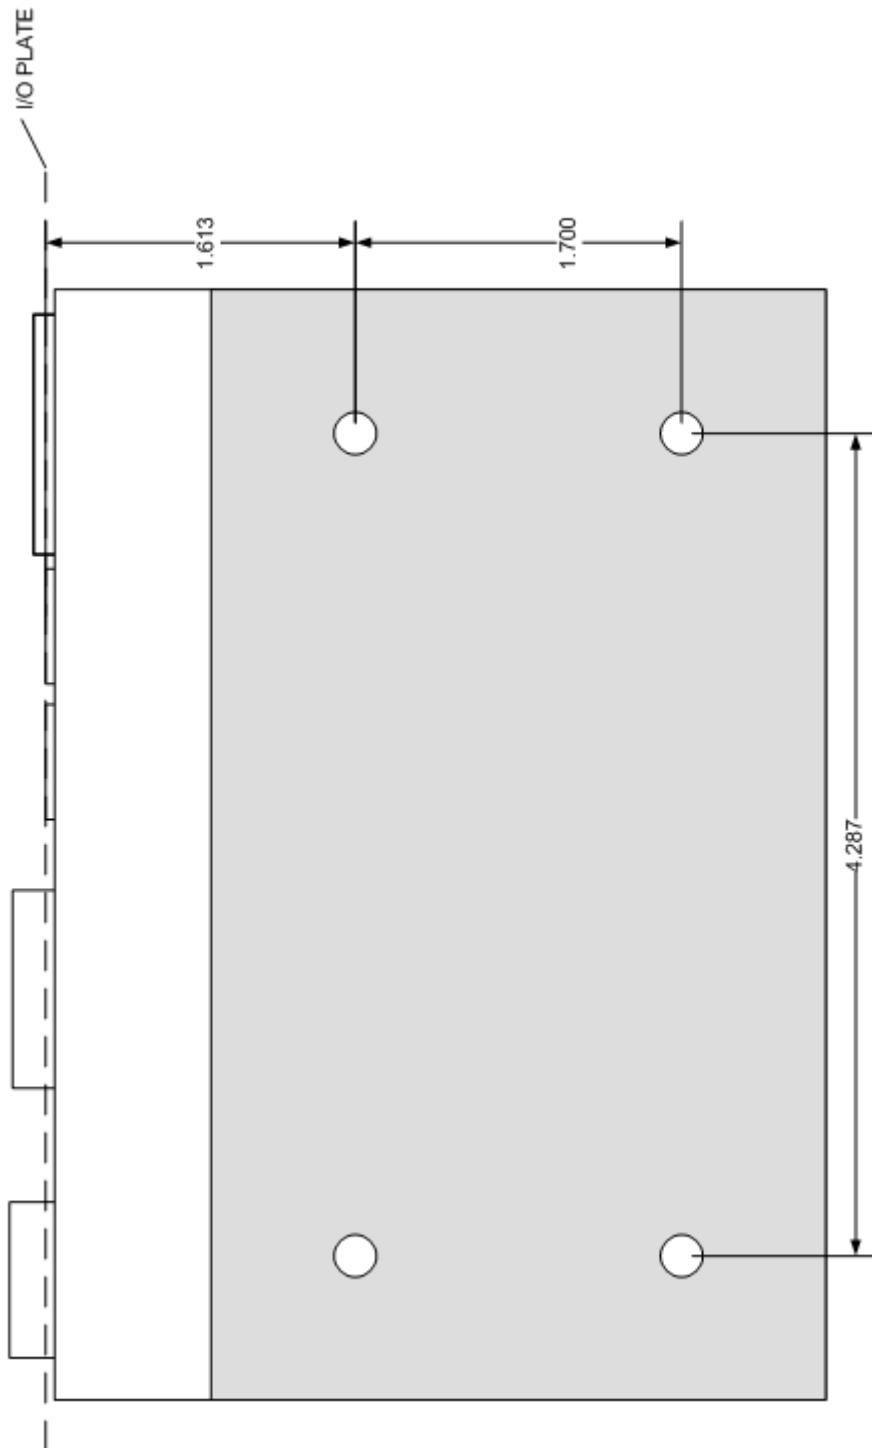

## 6.4 Heat Spreader: Chassis Mount

The figure below includes all hole spacing for each heat spreader available and can be used to aid in mating the heat spreader to a bulkhead or chassis.

### NOTE

Dimensions are in inch (1 in = 2.54cm; 1 mil = 0.0254 mm)

## 7 Technical Data

### 7.1 Electrical Data

**Power Supply:**

Board: 5 Volt +/- 5% (5 Volt Suspend / 12 Volt Fan)  
RTC: >= 3 Volt

**Electric Power Consumption:**

RTC: <= 10µA

### 7.2 Environmental Conditions

**Temperature Range:**

Operating: -25°C to +70°C (using approved thermal solution)  
-40°C up to +85°C (when pre-screened for use with an  
approved thermal solution)  
Storage: -40°C up to +85°C  
Shipping: -40°C up to +85°C, for packaged boards

**Temperature Changes:**

Operating: 0.5°C per minute, 7.5°C per 30 minutes  
Storage: 1.0°C per minute  
Shipping: 1.0°C per minute, for packaged boards

**Relative Humidity:**

Operating: 5% up to 85% (non condensing)  
Storage: 5% up to 95% (non condensing)  
Shipping: 5% up to 100% (non condensing), for packaged boards

**Shock:**

Operating: 150m/s<sup>2</sup>, 6ms  
Storage: 400m/s<sup>2</sup>, 6ms  
Shipping: 400m/s<sup>2</sup>, 6ms, for packaged boards

**Vibration:**

Operating: 10 up to 58Hz, 0.075mm amplitude  
58 up to 500Hz, 10m/s<sup>2</sup>  
Storage: 5 up to 9Hz, 3.5mm amplitude  
9 up to 500Hz, 10m/s<sup>2</sup>  
Shipping: 5 up to 9Hz, 3.5mm amplitude  
9 up to 500Hz, 10m/s<sup>2</sup>, for packaged boards

**CAUTION**

Shock and vibration figures pertain to the motherboard alone and do not include additional components such as heat sinks, memory modules, cables etc.

## 7.3 Thermal Specifications

The board is specified to operate in an environmental temperature range from -25°C to +70°C when using an approved thermal solution, and an extended temperature range of -40°C to +85°C when pre-screened for use with an approved thermal solution.

Maximum die temperature is 100°C. To keep the processor under this threshold an appropriate cooling solution needs to be applied. This solution has to take typical and maximum power consumption into account. The maximum power consumption may be twice as high and should be used as a basis for the cooling concept. Additional controllers may also affect the cooling concept. The power consumption of such components may be comparable to the consumption of the processor.

The board design includes thermal solution mounting points that will provide the best possible thermal interface between die and solution. Since we take thermal solutions seriously we have several advanced, aggressive cooling solutions in our product portfolio. Please contact your sales representative to order or discuss your thermal solution needs.

### CAUTION

The end customer has the responsibility to ensure that the die temperature of the processor does not exceed 100°C. Permanent overheating may destroy the board!

In case the temperature exceeds 100°C the environmental temperature must be reduced. Under certain circumstances sufficient air circulation must be provided.

## I Annex: Post-Codes

During boot, the BIOS generates a sequence of status codes (so-called "POST codes"), which can be viewed using a special output device (POST code card). The meaning of these codes is described in the document "Aptio™ 4.x Status Codes" by American Megatrends®, which can be downloaded from their website <http://www.ami.com>. The following additional OEM POST codes are generated:

Code	Description
87h	BIOS-API started
88h	PCA9535 started
89h	PWRCTRL-Firmware started

## II Annex: Resources

### IO Range

The used resources depend on setup settings.

The given values are ranges, which are fixed by AT compatibility. Other IO ranges are used, which are dynamically adjusted by Plug & Play BIOS while booting.

Address	Function
0-FF	Reserved IO area of the board
170-17F	
1F0-1F7	
278-27F	
2E8-2EF	COM4
2F8-2FF	COM2
370-377	
378-37F	
3BC-3BF	
3E8-3EF	COM3
3F0-3F7	
3F8-3FF	COM1

### Memory Range

The used resources depend on setup settings.

If the entire range is clogged through option ROMs, these functions do not work anymore.

Address	Function
A0000-BFFFF	VGA RAM
C0000-CFFFF	VGA BIOS
D0000-E7FFF	AHCI BIOS / RAID / PXE (if available)
E8000-FFFFF	System BIOS

### Interrupt

The used resources depend on setup settings.

The listed interrupts and their use are given through AT compatibility.

If interrupts must exclusively be available on the ISA side, they have to be reserved through the BIOS setup. The exclusivity is not given and not possible on the PCI side.

Address	Function
IRQ0	Timer
IRQ1	PS/2 Keyboard
IRQ2 (9)	
IRQ3	COM1
IRQ4	COM2
IRQ5	
IRQ6	
IRQ7	
IRQ8	RTC
IRQ9	
IRQ10	COM4
IRQ11	COM3
IRQ12	PS/2 Mouse
IRQ13	FPU

Address	Function
IRQ14	
IRQ15	

## PCI Devices

All listed PCI devices exist on the board. Some PCI devices or functions of devices may be disabled in the BIOS setup. Once a device is disabled other devices may get PCI bus numbers different from the ones listed in the table.

AD	INTA	REQ	Bus	Dev.	Fct.	Controller / Slot

## SMB Devices

The following table contains all reserved SM-Bus device addresses in 8-bit notation. Note that external devices must not use any of these addresses even if the component mentioned in the table is not present on the motherboard.

Address	Function
10-11	Standard slave address
40-41	GPIO
70-73	POST code output
88-89	BIOS-defined slave address
A0-A1	DIMM 1
A2-A3	DIMM 2
A4-AF	BIOS internal

## Annex: Resources
