2 Notes on the documentation

This description is only intended for the use of trained specialists in control and automation engineering who are familiar with the applicable national standards.

It is essential that the documentation and the following notes and explanations are followed when installing and commissioning the components.

It is the duty of the technical personnel to use the documentation published at the respective time of each installation and commissioning.

The responsible staff must ensure that the application or use of the products described satisfy all the requirements for safety, including all the relevant laws, regulations, guidelines and standards.

Disclaimer

The documentation has been prepared with care. The products described are, however, constantly under development.

We reserve the right to revise and change the documentation at any time and without prior announcement.

No claims for the modification of products that have already been supplied may be made on the basis of the data, diagrams and descriptions in this documentation.

Warranty

This product is warranted to be free of defects in workmanship and material. ADL Embedded Solutions' sole obligation under this warranty is to provide replacement parts or repair services at no charge, except shipping cost. Such defects which appear within 12 months of original shipment of ADL Embedded Solutions will be covered, provided a written claim for service under warranty is received by ADL Embedded Solutions no less than 30 days prior to the end of the warranty period or within 30 days of discovery of the defect – whichever comes first. Warranty coverage is contingent upon proper handling and operation of the product. Improper use such as unauthorized modifications or repair, operation outside of specified ratings, or physical damage may void any service claims under warranty.

Return Authorization

All equipment returned to ADL Embedded Solutions for evaluation, repair, credit return, modification, or any other reason must be accompanied by a Return Material Authorization (RMA) number. ADL Embedded Solutions requires a completed RMA request form to be submitted in order to issue an RMA number. The form can be found under the Support section at our website: www.adl-usa.com or www.adl-europe.com. Submit the completed form to support@adl-usa.com or fax to +1 858-490-0599 for the USA office, or to rma@adl-europe.com or fax to +49 (0) 271 250 810 20 to request an RMA from the European office in Germany. Following a review of the information provided, ADL Embedded Solutions will issue an RMA number.

3 Safety instructions

Safety regulations

Please note the following safety instructions and explanations!
 Product-specific safety instructions can be found on following pages or in the areas mounting, wiring, commissioning etc.

Exclusion of liability

All the components are supplied in particular hardware and software configurations appropriate for the application. Modifications to hardware or software configurations other than those described in the documentation are not permitted, and nullify the liability of ADL Embedded Solutions.

Personnel qualification

This description is only intended for trained specialists in control, automation and drive engineering who are familiar with the applicable national standards.

Description of symbols

In this documentation the following symbols are used with an accompanying safety instruction or note. The safety instructions must be read carefully and followed without fail!

⚠ DANGER
<p>Serious risk of injury!</p> <p>Failure to follow the safety instructions associated with this symbol directly endangers the life and health of persons.</p>
⚠ WARNING
<p>Risk of injury!</p> <p>Failure to follow the safety instructions associated with this symbol endangers the life and health of persons.</p>
⚠ CAUTION
<p>Personal injuries!</p> <p>Failure to follow the safety instructions associated with this symbol can lead to injuries to persons.</p>
NOTE
<p>Damage to the environment or devices</p> <p>Failure to follow the instructions associated with this symbol can lead to damage to the environment or equipment.</p>

Tip or pointer

This symbol indicates information that contributes to better understanding.

4 Overview

4.1 Properties

The ADL120 is designed as a high-performance compact board based on Intel®'s Skylake and Kabylake processors. The latest energy-saving DDR4 technology enables memory extension of up to 32 GB via SO-DIMM260.

As standard interfaces two DisplayPort connections, four Gigabit LAN connections and four USB 3.0 interfaces are available on the front panel. *The two DisplayPorts++ enable the connection of an HDMI adapter for an HDMI signal. The connection of an HDMI display with adapter is possible.*

Two variants are available, variant 1 being equipped with a Q170 chipset and variant 2 with an H110 chipset.

Internally both variants of the ADL120 have two M.2 (B) sockets (2280), while variant 1 additionally has a BAsCon140 connector. Various signals, which are listed in the respective chapter, are led out via the internal plug connector depending on the chipset in use.

Power is supplied via a 4-pin connector on the front panel. Input voltage is isolated 24 V.

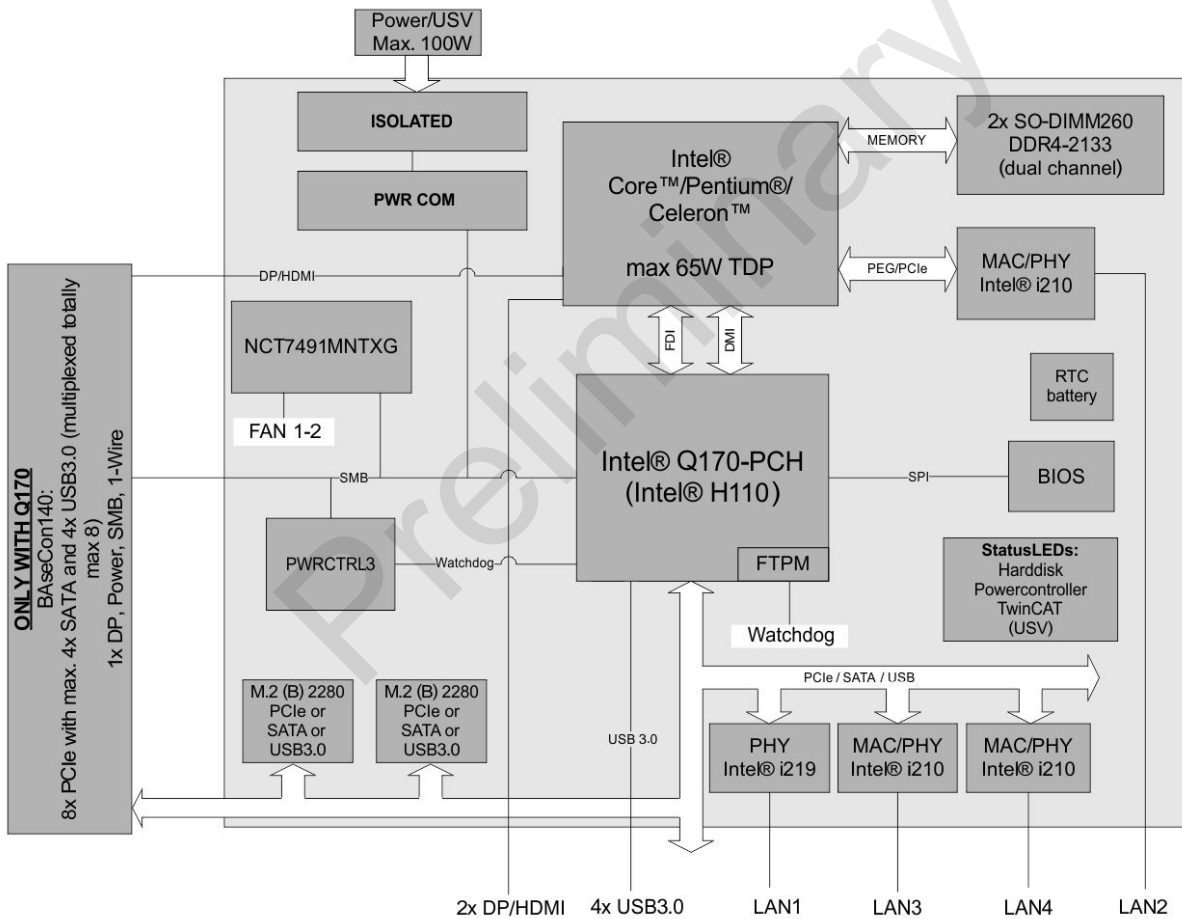

Fig. 1: Block diagram_ADL120

4.2 List of features

ADL120	120 x 120 board
CPU	Intel® Core™ i3 / Core™ i5 / Core™ i7 Intel® Pentium® Intel® Celeron®
Memory	2x SO-DIMM260 1.2V DDR4-2133 Maximum memory extension 32 GB
I/O on front panel	2x DisplayPort++ (connection of an HDMI adapter for an HDMI signal is possible.) 4x GB LAN 4x USB 3.0
Internal I/O	2x M.2 (B) sockets, signals dependent on chipset <u>Internal: M.2 [▶ 21]</u> With Q170 only: 1x BAseCon140 <u>Internal: BAseCon140 (Q170 only) [▶ 24]</u>
Graphic resolution	DisplayPort: 4096x2304@60 Hz HDMI1.4: 2560x1600@60 Hz; 4096x2160@24 Hz DVI: 1920x1200@60 Hz
RTC	Exchangeable, horizontal on-board battery Optional: horizontal battery on expansion card
BIOS	AMI® Aptio V
Power supply	24 V
Format	120 x 120 mm

● Availability of the processors

i The list of features lists all the processors that can be ordered. Their actual availability depends on the manufacturer.

4.3 Specifications and documents

5 Detailed description

5.1 Power supply

The board is supplied with an isolated input voltage of nominally 24 V, which in reality may lie between 20 V and 30 V. In normal operation the DC/DC power rail is supplied with this voltage. A UPS can also be implemented via an OCT signal (OCT = One Cable Technology).

UPS-OCT

The UPS-OCT can only be implemented with the Beckhoff CU81XX-xxxx UPS.

5.2 CPU

The processors employed are Intel® processors of the 6th (Skylake) and 7th (KabyLake) generation. Processors of both generations are characterized by a very low power consumption and offer contemporary performance with clock rates of currently up to 3.9 GHz.

5.3 Memory

SO-DIMM260 memory modules (DDR4-2133) commonly used in notebooks are used on the ADL120 board. For technical and mechanical reasons it is possible that certain memory modules cannot be used. Ask your distributor about the recommended memory modules.

With the currently available SO-DIMM260 modules a memory extension up to 32 GB is possible depending on the product variant. When equipping both memory sockets, care must be taken that identical memory modules are used.

5.4 M.2

Expansion cards that fulfill the M.2 specification are characterized by an extremely small format and – depending on the card type – flexible dimensions.

M.2 cards can easily and simply be inserted by plugging them into the slot and fixing them with a screw.

The M.2 socket of the ADL120 supports Key B. Different signals are supported depending on the chipset in use. The table in chapter M.2 lists all the interfaces supported, depending on the chipset in use.

Driver compatibility

For optimum driver compatibility we recommend the use of a Microsoft® Windows 10 operating system.

6 External connections

6.1 Note on the use of cables

i **Requirement for the cabling!**

The cables used must meet certain requirements for most interfaces. For example, twisted and shielded cables are necessary for a reliable USB 2.0 connection. Limitations in the maximum cable length are also no rarity. All of these interface-specific requirements are to be taken from the respective specifications and observed accordingly.

Preliminary

6.2 Connector Map

The plug connections on the component side of the ADL120 board are summarized in the illustration below. The function of the respective connector can be taken from the table below the illustration, as can the page of the manual on which further information about this connection can be read.

Fig. 2: Connector Map

Preliminary

6.3 Interface list

Number	Function (Designation)	Page
P1500	Vin (X101)	Front panel: Power supply (X101) [▶ 17]
P1100	LAN 1 (X102)	Front panel: LAN1-4 (X102-X105) [▶ 18]
P1100	LAN 2 (X103)	Front panel: LAN1-4 (X102-X105) [▶ 18]
P1101	LAN 3 (X104)	Front panel: LAN1-4 (X102-X105) [▶ 18]
P1101	LAN 4 (X105)	Front panel: LAN1-4 (X102-X105) [▶ 18]

P1102	USB3.0 (X107)	Front panel: USB 3.0 A-D (X106 - X109) [▶ 19]
P1102	USB3.0 (X108)	Front panel: USB 3.0 A-D (X106 - X109) [▶ 19]
P1102	USB3.0 (X109)	Front panel: USB 3.0 A-D (X106 - X109) [▶ 19]
P1103	DisplayPort (X110, X111)	Front panel: DisplayPort (X110, X110) [▶ 20]
P1200/1*	M.2, Key B	Internal: M.2 [▶ 21]
P1203*	BAseCon140	Internal: BAseCon140 (Q170 only) [▶ 24]
P500/501	FAN	Internal: Battery [▶ 29]
BT1200*	Battery	Internal: FAN [▶ 28]

*not depicted (see bottom of board)

The numbers in brackets correspond to the inscription of the external interfaces on the front housing of the industrial pc.

6.4 Front panel: Power supply (X101)

The connection to the power supply is implemented as a 2x2-pin housing plug (Phoenix Contact P20THR-1818504). The main supply voltage (24 V) for the module is on PIN 3. This can also be implemented as UPS-OCT (One Cable Technology), i.e. the signal for the UPS is also transmitted to the board via this cable.

Fig. 3: ADL120 Vin

● 90° plug

i As the plug is a 90° plug, the plug symbol in the illustration is oriented to what you see when you look at the board from the side (instead of from above).

Pin assignment of the power plug:

Description	Signal	Pin	Signal	Description
PC Start: Input for starting and shutting down the PC. Low (0 V or open contact): PC starts. High (>3 V): PC shuts down.	PC_START	1 3	Vin	24 V supply voltage UPS OCT is supported
PC Status: Output of the PC status. The voltage corresponds to the positive supply voltage and can be loaded with 1 A. Low (0 V): PC is off. High (Vin): PC is on.	PC_ACTIVE	2 4	GND	Ground

6.5 Front panel: LAN1-4 (X102-X105)

The board has four Gigabit-LAN connections, which are implemented with two standard connectors, each with two connections. Network components compatible with 10BaseT, 100BaseT and 1000BaseT can be connected to all of them. The required speed is selected automatically. Auto-Cross and Auto-Negotiate are available as well as PXE, RPL and WOL functionality. Intel® i219 (PHY) is the controller for LAN1, while Intel® i210 (MAC/PHY) is used as the controller for LAN 2 to 4.

● Real-time applications

i The Ethernet port connected via PCIe is usually suitable for cycle times ≤ 1 ms and for distributed clock applications with EtherCAT.
 The Ethernet port integrated in the chipset is usually suitable for real-time Ethernet applications with cycle times > 1 ms (without distributed clocks).

Fig. 4: ADL120 LAN

● 90° plug

i As the plug is a 90° plug, the plug symbol in the illustration is oriented to what you see when you look at the board from the side (instead of from above).

Pin assignment of LAN connector:

Pin	Name	Description
1	LAN-0	LAN line 0 plus
2	LAN-0#	LAN line 0 minus
3	LAN-1	LAN line 1 plus
4	LAN-2	LAN line 2 plus
5	LAN-2#	LAN line 2 minus
6	LAN-1#	LAN line 1 minus
7	LAN-3	LAN line 3 plus
8	LAN-3#	LAN line 3 minus

The LEDs of the LAN interfaces indicate the activity and speed of the data transmission:

Mbit/s	Flashing during data transmission	Steadily lit
1000	Green	Green
100	Green	Orange
10	Green	None

6.6 Front panel: USB 3.0 A-D (X106 - X109)

The ADL120 provides four USB 3.0 ports, which are implemented as combination connectors with 4 connectors.

The USB channels support the USB 3.0 specification. All necessary settings for USB can be made in the BIOS. Note that the "USB mouse and keyboard" function in the BIOS setup is only required if the operating system does not offer USB support. This function should not be selected for settings in the setup and for booting Windows with a USB mouse and keyboard connected, because this would lead to considerable performance limitations.

The individual USB interfaces can supply a current of up to 900 mA and are electronically protected.

Switch-off of the USB ports by overcurrent protection

i USB ports A and B and USB ports C and D are each protected by a common overcurrent detection. In the event of overcurrent occurring on one of the ports, therefore, both commonly protected USB ports will be switched off.

Fig. 5: ADL120 USB 3.0

90° plug

i As the plug is a 90° plug, the plug symbol in the illustration is oriented to what you see when you look at the board from the side (instead of from above).

Pin assignment of USB 3.0 connector:

Pin	Signal	Description
1	VCC	5 V supply voltage
2	D-	Data minus (USB 2.0)
3	D+	Data plus (USB 2.0)
4	GND	Ground
5	Rx-	Receive line minus
6	RX+	Receive line plus
7	GND	Ground
8	TX-	Transmit line minus
9	TX+	Transmit line plus

6.7 Front panel: DisplayPort (X110, X110)

For devices with a DisplayPort connection a corresponding standard connector (Foxconn 3VD11203-DPA1-4H) with two DisplayPort connections is available.

The interface additionally provides HDMI/DVI signals that can be used with aid of an adapter. Please consult your distributor with regard to a suitable adapter.

Fig. 6: ADL120 Display Port

● 90° plug

i As the plug is a 90° plug, the plug symbol in the illustration is oriented to what you see when you look at the board from the side (instead of from above).

Pin assignment of DisplayPort plug:

Description	Signal	Pin	Pin	Signal	Description
Line 0 plus	L0	1	2	GND	Ground
Line 0 minus	L#0	3	4	L1	Line 1 plus
Ground	GND	5	6	L#1	Line 1 minus
Line 2 plus	L2	7	8	GND	Ground
Line 2 minus	L#2	9	10	L3	Line 3 plus
Ground	GND	11	12	L#3	Line 3 minus
HDMI	HDMI#	13	14	GND	Ground
Auxiliary plus	AUX	15	16	GND	Ground
Auxiliary minus	AUX#	17	18	HPD	Hot Plug Detect
Ground	GND	19	20	3.3 V	3.3 V supply voltage

● Switching to HDMI

i DisplayPort signals are led out via the interface by default. With the use of a level shifter cable the board switches according to the DisplayPort specification 1.1 automatically to HDMI signals.

7 Internal connections

7.1 Internal: M.2

The ADL120 is equipped with two M.2 sockets, into each of which an M.2-2280 card (Key B) is inserted. Various signals are led out via the socket, depending on the chipset (see table).

Q170	H110
2x USB 3.0 (1x per socket)	2x USB 2.0 (1x per socket)
2x SATA Gen 3 (1x per socket) or 2x PCIe x1 Gen 3 (1x per socket) or 1x PCIe x1 and 1x SATA Gen 3	2x SATA Gen 3 (1x per socket)

Adapter cards with standard plug connectors are available as accessories. Please contact your distributor for this.

Fig. 7: ADL120 M.2

Pin assignment of M.2 connector:

Preliminary

7.2 Internal: BAsCon140 (Q170 only)

In conjunction with the Q170 chipset, the BAsCon140 connector enables the flexible extension of the IO functions of the ADL120. It provides up to eight PCIe lanes, of which a maximum of four can be multiplexed with SATA 2.0 (3G) and a maximum of four with PCIe lines, as well as a maximum of four PCIe lines with a maximum of four USB 3.0 lines (see table). In addition, DisplayPort, SSIC, SMBus and 1Wire signals are led out via the BAsCon connector. The expansion board takes care of the configuration of the IO functions. A PIC on the expansion card contains the configuration data that are communicated to the board upon connection, thus enabling an uncomplicated and self-configuring extension to the IO options.

With Q170 only	
Max. 4x SATA Gen 3 / max. 4x PCIe x1 Gen 3 (multiplexed)	Total: 8x PCIe x1 (configurable – see left)
Max. 4x USB 3.0 / max. 4x PCIe x1 Gen 3 (multiplexed)	
1x DisplayPort 1.4 / HDMI 2.0	

i Observe the current limits!

In order to avoid damaging the device, it is essential to observe the following current limits:

A maximum load of 2.8 A per pin must not be exceeded. On account of the different current consumptions of the usable processors the actual current consumption may be lower. The respective maximum values can be obtained from your distributor on enquiry.

Irrespective of the CPU in use, a maximum total load of 100 W must not be exceeded.

Fig. 8: ADL120 BAsCon

Preliminary

7.3 Internal: FAN

The module has two 4-pin fan connections. This enables fans with a supply voltage of 12 V to be connected directly to the module. A signal is also available for monitoring the fan speed.

Fig. 9: ADL120 FAN

Pin assignment of fan connector:

Pin	Signal	Description
1	GND	Ground
2	12 V	Supply voltage 12 V regulated
3	TACHO	Speed monitoring
4	PWM	Speed control

7.4 Internal: Battery

The board is delivered with a CR2032 battery holder (Renata VBH2032-1) including a 3 V battery.

	<p>UL conformity</p> <p>All technical measures for UL conformity are already integrated on the board.</p> <p>Accordingly, no additional actions are necessary for the connection of an RTC battery. The battery must be connected directly.</p>
---	--

Fig. 10: ADL120 Bat

i Synchronism of the RTC

The quartz of the RTC reacts to temperature fluctuations. Therefore, correct synchronism of the RTC is possible only with suitable and sufficient cooling!

8 LEDs

8.1 LED: Power controller

There is an RGB LED on the board with which status messages of the power controller are output by means of colors and flashing intervals.

Fig. 11: ADL120 PWRCTRL-LED

Color	Interval	Meaning
None	Steadily lit	System in error state
White	Steadily lit	Power fail
Cyan	Steadily lit	Reserved
Magenta	Steadily lit	S UPS active (if existent)
Blue	Steadily lit	Reserved
Yellow	Steadily lit	S5 state
Green	Steadily lit	S0 state
Red	Steadily lit	Reset/Start
Green/yellow	Flashing	Bootloader running without error
Red/yellow	Flashing	Bootloader is starting (start sequence is being run through)
Yellow	Flashing (6 s)	S4 state
Yellow	Flashing (3 s)	S3 state
Magenta	Flashing (0.5 s)	S UPS capacitance test (if S UPS exists)
Red/magenta	Flashing	Checksum error during the I2C transmission in the bootloader

A steadily lit red LED can indicate a hardware error.

i Adaption of the status codes

It is possible to adapt the status codes (e.g. as TwinCAT LED). To do this, the system colors can be changed with the aid of an SMB command. This change remains in force until the next restart or reset. A change of the default colors is indicated by the additional flashing of the white LED.

8.2 LED: SATA

A further RGB LED indicates the hard disk activity.

Fig. 12: ADL120 SATA-LED

Color	Interval	Meaning
Red	Flashing	Activity (access)

Preliminary

8.3 LED: TwinCAT

Fig. 13: ADL120 TwinCAT LED

Color	Interval	Meaning
Green	Steadily lit	TwinCAT Run Mode
Blue	Steadily lit	TwinCAT Config Mode
Red	Steadily lit	TwinCAT Stop

i Adaptation of the status codes

It is possible to adapt the status codes (e.g. as TwinCAT LED). To do this, the system colors can be changed with the aid of an SMB command. This change remains in force until the next restart or reset. A change of the default colors is indicated by the additional flashing of the white LED.

8.4 LED: UPS-OCT

There is an RGB LED on the board with which the transmission quality of the UPS-OCT signals is indicated by means of colors and flashing intervals.

Fig. 14: ADL120 UPS-OCT LED

Color	Interval	Meaning
None	Steadily lit	No UPS-OCT connected
Blue	Flashing	Bootloader active
Yellow	Steadily lit	Moderate signal quality
Green	Steadily lit	Good signal quality
Red	Steadily lit	Poor signal quality

If the LED does not light up, no UPS-OCT is connected.

i Adaptation of the status codes

It is possible to adapt the status codes (e.g. as UPS-OCT-LED). To do this, the system colors can be changed with the aid of an SMB command. This change remains in force until the next restart or reset.

Preliminary

11 Technical data

11.1 Electrical data

Power supply	
Board	24 V (+/- 5%)
RTC	>= 3 μ m
Power consumption	
RTC	<= 10 μ m

11.2 Environmental conditions

Temperature range	
Operating	0 °C up to +60 °C (more extended temperture range on request)
Storage	-25 °C up to +85 °C
Dispatch	-25 °C up to +85 °C, for wrapped boards
Temperature changes	
Operating	0.5 °C per minute, 7.5 °C in 30 minutes
Storage	1.0 °C per minute
Dispatch	1.0 °C per minute, for wrapped boards
Relative air humidity	
Operating	5% up to 85% (non-condensing)
Storage	5% up to 95% (non-condensing)
Dispatch	5% up to 100% (non-condensing), for wrapped boards
Impact	
Operating	150 m/s ² , 6 ms
Storage	400 m/s ² , 6 ms
Dispatch	400 m/s ² , 6 ms, for wrapped boards
Vibration	
Operating	10 up to 58 Hz, 0.075 mm amplitude
Storage	5 up to 9 Hz, 3.5 mm amplitude 9 up to 500 Hz, 10 m/s ²
Dispatch	5 up to 9 Hz, 3.5 mm amplitude 9 up to 500 Hz, 10 m/s ² , for wrapped boards

i Note on impact and vibration resistance

The specifications for impact and vibration resistance refer only to the motherboard itself without heat sink, memory module, cabling, etc.

11.3 Technical specifications

The board is specified for an ambient temperature range of 0 °C to +60 °C (extended temperature range on enquiry). In addition, care must be taken that the temperature of the processor die does not exceed 100 °C. A suitable cooling concept must be implemented for this that is oriented to the maximum power consumption of the processor/chipset. Please note: also that any existing controllers are included in the cooling concept. The power consumption of these modules may be of the same order of magnitude as the power consumption of the processor.

The board is prepared with suitable holes for the use of modern cooling solutions. We have a series of compatible cooling components in our range. Your distributor will be glad to advise you on choosing suitable solutions.

NOTE

Prevent the maximum die temperature being exceeded!

It is the end customer's responsibility to ensure that the die temperature of the processor does not exceed 100 °C! Continuous overheating can destroy the board!

If the temperature exceeds 100 °C, the ambient temperature needs to be reduced. Ensure sufficient air circulation if necessary.

Preliminary

12 Support

12.1 Technical Support

Technical support for this product can be obtained in the following ways:

- By contacting our support staff at +1 858-490-0597 or +49 (0) 271 250 810 0
- By contacting our staff via e-mail at support@adl-usa.com or support@adl-europe.com
- Via our website at www.adl-usa.com/support or www.adl-europe.com/support

Preliminary

13 Appendix I: Post Codes

During the boot phase, the BIOS generates a series of status messages (so-called "POST Codes"), which can be output with the help of a suitable reading device (POST Code card). The meanings of the POST Codes are explained in the document "Aptio™ 5.x Status Codes" from American Megatrends®, which is available from the website <http://www.ami.com>. In addition, the following OEM POST Codes are output:

Code	Description
87h	BIOS-API started
88h	PCA9535 started
89h	PWRCTRL firmware started

Preliminary

14 Appendix II: Resources

14.1 Interrupt

The resources used are independent of the setup setting. The listed interrupts and their use are given by the AT compatibility. If interrupts have to be exclusively available on the ISA side, they must be reserved through the BIOS setup. Exclusivity is neither given nor possible on the PCI side.

Address	Function
IRQ0	Timer
IRQ1	
IRQ2	
IRQ3	
IRQ4	
IRQ5	
IRQ6	
IRQ7	
IRQ8	RTC
IRQ9	
IRQ10	
IRQ11	
IRQ12	
IRQ13	FPU
IRQ14	
IRQ15	

14.2 PCI Devices

The PCI devices listed here all exist on the board, including those that are detected and configured by the BIOS. Due to the BIOS setup settings it may be the case that various PCI devices or functions of devices are not activated. If devices are deactivated, the bus numbers of other devices may change as a result.

		3	00	0	Ethernet Controller x1 (x1) ID1531

14.3 SMB-Devices

The following table lists the reserved SM-Bus device addresses in 8-bit notation.

NOTE

These address ranges may not be used by external devices even if the component assigned in the table doesn't exist on the motherboard.

Address	Function
34-35	API access to power supply unit
36-39	Reserved
5C-5D	NCT7491
60-6F	Reserved for DDR4
70-73	POST Code output
88-89	Slave address defined by BIOS
92-93	I210 default
A0-A7	Reserved for DDR4
B0-B3	Power controller (access via BIOS-API)
B8-BB	Power controller (access via BIOS-API)
